AGRICULTURAL STATISTICS

OF

INDIA

FOR THE YEARS

1901-02 TO 1905-06

VOLUME I—BRITISH INDIA

Prefatory Note

In 1866 a set of tables proposed by a specially appointed Statistical Committee was prescribed by the Government of India for general adoption as appendices to the annual reports on general administration.

In 1884, at the instance of the Secretary of State for India, some of these forms, relating to agriculture, land, and tenures, were reconsidered and modified, after examination and discussion by a conference of officers of the Agricultural Departments. The modified tables, eight in number, were compiled for the first time for 1884-85 and published under the title of 'Returns of Agricultural Statistics of British India.' These tables were prepared and published annually until 1887-88, when a re-arrangement was made of the headings of four statements dealing with area, irrigation, crops, and agricultural stock, though no modification was made in substance.

In 1891 the tables were again revised and, to some extent, recast. The revised series of 1891 has, with a few unimportant alterations, been maintained to the present time, with the exception that two tables (wholesale prices and varieties of tenure) have been discontinued, other arrangements having been made to secure a record of prices.

The following schedule compares the three series of 1866, 1884, and 1891:—

1866	1884	1891
IA. 1.—Area cultivated and uncultivated.	A.—Area cultivated and uncultivated. Irrigation.	A.—Total acreage, classification of areas (including irrigation), area under crops, and stock.
IIID. 1.—Crops cultivated.	B.—Crops cultivated.	
IIID. 2.—Agricultural stock.	IIID. 2.—Agricultural stock.	
IIIE. 1.—Prices of produce.	IIIE. 1.—Prices of produce.	B.—Prices of produce. (Discontinued from 1894-95.)
IE. 2.—Surveyed and assessed area.	C.—Surveyed and assessed area.	C.—Incidence of the land revenue on area and population.
IE. 3.—Varieties of tenure held direct from Government.	IE. 3.—Varieties of tenure held direct from Government.	D.—Varieties of tenure held direct from Government. (Discontinued from 1901-02.)
IE. 4.—Varieties of tenure not held direct from Government.	(Discontinued.)	(Discontinued.)
IE. 5.—Register of transfers.	IE. 5.—Register of transfers.	E.—Register of transfers of landed property.
IIID. 3.—Rates of rent and produce.	(Discontinued.)	(Discontinued).

The tables of the series of 1891 as published in this volume consist of six separate tables numbered, 1 (area), 2 (classification of area), 3 (area under crops), 4 (live-stock, etc.), 5 (land revenue), and 6 (transfers of land). Each table gives the figures for each province for five years with a total for British India, and is followed by subsidiary statements numbered 1-A, 1-B, 1-C, etc., giving similar figures for each district in each province. Besides these there are four tables of a special nature which deal with tea production, coffee production, area and yield of certain crops, and average yield per acre of principal crops; each of these is first published separately with a reviewing note or memorandum, and all four are republished in this volume, being numbered 7, 8, 9, and 10, respectively. The remaining table, numbered 11, which shows the changes in district, divisional, and provincial boundaries, serves as an explanatory statement of the variations in the areas shown in table No. 1 and was formerly published as an appendix to the Agricultural Statistics of British India.

The general scope of the figures given in these tables may be explained as follows:—

The total area of India is 1,133,977,169 acres or 1,771,839 square miles with a population of 294 millions. This may be divided as follows:—

	Acres.	Population.
(1) British Provinces (including Native States under the control of Local Governments) .	744,907,040	252,353,045
(2) Native States under the control of the Government of India . . .	315,584,689	40,358,452
(3) Certain Native States* in Burma not included under (1)	43,625,600	1,237,749
(4) British Baluchistan (including administered areas)	29,859,840	343,187

The area of British Baluchistan is excluded entirely from the Agricultural Statistics of British India. The area of British Provinces only is dealt with in this volume—tables 1—6 and 11. In tables 7—10 figures relating to certain Native States are included. Volume II deals only with certain Native States.

The total area of the British Provinces dealt with in this volume—744,907,040 acres or 1,163,605 square miles—includes 130,702,801 acres, with a population of over 22 millions, belonging to Feudatory and Tributary States, which are under the political control of Local Governments. These include, in Burma, the Mông Mit State, the Hsawnghsup State, the Singkaling State, and the Chindwin States; in Eastern Bengal and Assam, the Khási and Jaintiá Hill States, Manipur, and Hill Tippera; in Bengal, Sikkim, Cooch Bihar, and the Tributary States of Orissa and Chota Nagpur; in the United Provinces, Rampur and Tehri; in the Panjab, the Phulkian States, Bahawalpur, the Delhi and the Jallandhar Division States, and the Simla Hill States; in the North-West Frontier Province, the Phulera and the Upper Tanawal States; in Sind, the Khairpur State; in Bombay, the Gujarat States (excluding Baroda), the Konkan States, the Satara Jagirs, and the Southern Maratha States; in the Central Provinces, the Chhattisgarh States; in Madras, the States of Travancore, Cochin, Pudukkottai, Banganapalle, and Sandur. No returns of Agricultural Statistics are prepared for these States. There is also an area of 57,604,941 acres for which no returns are prepared. This comprises British Hill districts in Eastern Bengal and Assam and the United Provinces, and parts of districts in which there is no agency for collecting statistics, as, for example, unsurveyed tracts in the Panjab and unsurveyed villages in Bombay and Sind, and also estates held on permanent settlement or on

* Chin Hills, Pakkoku-Chin Hills, Shan States.

privileged tenure, in which there is no agency at present for the collection of statistics, such as *lakhiraj* estates in Assam, the family domains of the Maharaja of Benares in the United Provinces, and zamindari estates in Madras. Thus by deducting 130,702,801 acres belonging to Feudatory and Tributary States and another area of 57,604,941 acres for which no returns at present exist, from the total area of 744,907,040 acres included in British Provinces, a balance of 556,599,298 acres is left as shown in table No. 1, which represents the area for which Agricultural Statistics are forthcoming. These statistics are, however, prepared in a number of provinces from village papers; and the area given in the village papers of the United Provinces, the Central Provinces, Madras, the Panjab, and the North-West Frontier Province differ to some extent from the area ascertained by professional survey. The actual area, therefore, for which statistics are prepared is 557,236,906 acres or 870,683 square miles.

Less than two-thirds of this area is available for cultivation; 67,976,325 acres are under forests; and land absolutely barren or unculturable or covered by buildings, water and roads, or otherwise appropriated to uses other than agriculture amounts to 135,329,173 acres. The balance 353,931,408 acres represents the area available for cultivation, of which 207,683,741 acres were actually cropped during the year. The remainder is divided between current fallows (41,601,052 acres) and land available for cultivation but not cultivated and not classed as current fallows (104,646,615 acres).

Table No. 3 shows the number of acres cultivated with each kind of crop in each year. In the case of land from which more than one crop is taken, the area actually cultivated is shown under each crop-heading, but the total number of acres from which more than one crop was taken in the year is also recorded. Thus in 1905-06, the total area cultivated with different crops was 238,261,343 acres. But 30,577,602 acres were cropped more than once. The net area cropped according to the available statistics is therefore only 207,683,741 acres.

The proportion which this area bears to the whole area of India may be seen from the following summary :—

		Acres.
Total area of India		1,133,977,169
Deduct—Area not dealt with in this Volume—		
1. British Baluchistan	29,859,840	
2. Chin Hills, Pakkoku-Chin Hills, and Shan States	43,625,600	
3. Native States under the Government of India (partly dealt with in Volume II and also in tables 7—10 of this Volume)	315,584,689	
Balance dealt with in this Volume, tables 1—6 and 11		744,907,040
Deduct.—Area for which no Agricultural Statistics are available—		
1. Tributary and Feudatory States under Local Governments	130,702,801	
2. Other areas for which returns are not prepared	57,604,941	
Balance for which Agricultural Statistics are prepared		556,599,298
Corresponding area in village papers		557,236,906
Deduct—Area not available for cultivation—		
1. Forests	67,976,325	
2. Others	135,329,173	
Balance available for cultivation—		
1. Uncultivated		104,646,615
2. Fallow		41,601,052
3. Actually cropped		207,683,741

The notes prefixed to each table explain the changes which have been made since 1866 in the tables now published. The general instructions for compilation are given in the General Notes and local peculiarities or methods of compilation are mentioned in the Provincial Notes.

Such statistics as have been supplied for the permanently-settled tracts of Bengal have been included in the tables since 1892-93; but, with the exception of the North Bihar and Orissa districts which have recently been surveyed, they are not based upon accurate surveys or village papers, and must therefore for the most part be regarded as estimates.

The Native States from which agricultural statistics are received are Mysore, from 1886-87; Jaipur, from 1892-93; Gwalior, from 1896-97; Bikaner, Marwar, and Tonk, from 1898-99; Alwar, Bharatpur, Kishangarh, Jhalawar, and Kotah, from 1900-01. The statistics relating to all these States, which in some cases are very imperfect, are separately printed as Volume II. Those tables, however, which cannot be split up and contain figures for Native States as well as for British provinces are inserted in Volume I. These are table 7 "Tea Production" (including Travancore and Cochin); table 8 "Coffee Production" (including Mysore, Travancore, and Cochin); table 9 "Estimated Area and Yield of Crops" (including Hyderabad, Mysore, and certain States in Rajputana, Central India, Bombay, and Sind); and table 10 "Average Yield of Principal Crops" (including Mysore).

Certain statements are prepared for the Agricultural (or the Revenue) year which ends on different dates in different provinces:

year ending	31st March	in Bengal, Eastern Bengal and Assam, Coorg, and Manpur;
„ „	31st May	in the Central Provinces and Berar;
„ „	30th June	in Madras, United Provinces, Burma, and Ajmer-Merwara;
„ „	31st July	in Bombay;
„ „	30th September	in the Panjab and the North-West Frontier Province.

The crop statistics however in every province refer to the year closing with the harvesting of the *rabi* or cold weather crop.

A glossary is attached to this note giving the meaning of vernacular words used in the explanatory notes which are prefixed to the tables in this volume.

Vernacular terms used in the Explanatory Notes.

Bané (Coorg).—Forest land granted for the service of the holding of rice-fields to which it is allotted, to be held free of revenue for grazing, leaf manure, firewood, and for timber required for the farm.

Bhagdari.—See *Narvadari.*

Gorait (United Provinces).—Village watchman.

Inám (Madras).—*Whole inám* villages are *entire* villages held on such tenure; *minor ináms* are portions of villages, generally a number of fields held on inám tenure.

Istamrári (Panjab, Ajmer-Merwara).—A tenure which, though the revenue is assigned, is charged with a permanently fixed quit-rent.

Izáfat (Bombay).—A form of service tenure.

Izára (Berar).—Land leased under the waste-land rules on stipulated terms.

Jagír (Berar).—Alienated villages or lands granted as rewards for service either rent-free or on payment of a quit-rent; such lands are hereditary.

(Ajmer-Merwara).—Land granted revenue-free on condition of military service or as a charitable endowment.

(Bombay).—Estates held hereditarily or for one or more generations on political considerations, no condition of service being attached to them.

(Coorg).—Lands granted rent-free (1) to individuals on account of services rendered to the State by themselves or their ancestors, and (2) to some religious institutions.

Jamma (Coorg).—A tenure under which lands are held on half the ordinary assessment on condition that the holders should perform certain services to Government, if required, such as escorting Government treasure and rendering assistance to revenue officers on tour. These lands are inalienable without special sanction.

Jodi (Madras).—Portion of the assessment reserved or left unalienated when lands were originally granted on favourable assessment. It is distinguished from quit-rent, which represents an additional charge (generally a certain proportion—one-eighth, one-fourth, one-half, or five-eighths—of the full assessment, minus the jodi) imposed when the tenures were enfranchised or converted into free-holds.

Khálsa (Bombay).—Government occupancy or raiyatwari tenure.

(Central Provinces).—Areas settled on malguzari or thekadari tenure, in contradistinction to zamindari as defined in the note on page iv.

(Berar, Ajmer-Merwara).—Land paying full revenue to Government.

Khatedar (Berar).—A registered occupant whose name is entered by authority in the Government records as holding unalienated land.

Khiraj (Assam).—Land assessed to full revenue.

Khoti (Bombay).—A form of tenure, found chiefly in the Konkan, the holder of which is, in return for certain semi-proprietary rights, held responsible for payment of assessment on the area held.

Kwin (Burma) —A tract of land separated from other tracts by some well-defined boundaries, such as creeks or belts of forest.

Lakhiraj (Assam).—Revenue-free land.

Mahalkari (Bombay).—A revenue and police officer in charge of a sub-division of a taluk.

Malguzari (Central Provinces).—A form of tenure, the holder of which is responsible for the payment of the revenue assessed on a village.

Malikmakbuza (Central Provinces).—A person owning one or more plots of land separately assessed to revenue in a village, who is not a malguzar, inferior proprietor, or a member of the proprietary body of that village.

Mamlatdar (Bombay).—The chief revenue and police officer (native) in charge of a taluk.

Mehwasi (Bombay).—A proprietary tenure assessable to revenue at a lump sum.

Milankhasra (Bombay and Central Provinces).—An abstract record in which the village area is classified.

Mittas, Palayams (Madras).—Certain classes of permanently-settled estates differing in their origin from zamindaris. Mittas were artificial estates created under Madras Regulation XXV of 1802, while palayams are the estates of poligars or old chieftains. Most of the latter have been granted title-deeds of permanent settlement under the Regulation mentioned, but a few have not been settled, though in practice their revenue is treated as fixed.

Muafi (Manpur).—Any kind of land held revenue-free either for a fixed period or in perpetuity, but the term does not ordinarily apply to jagirs.

Munsarim (Berar).—A head native revenue officer.

Narvadari, Bhagdari (Bombay).—Forms of proprietary tenure involving joint responsibility for the assessment: the revenue in the former case being fixed in the lump, and in the latter distributed by rates over fields.

Nazúl (United Provinces).—Property escheated or lapsed to the State.

Nisfkhiraj (Assam).—Land liable to pay half the revenue which is ordinarily payable for the term of settlement.

Palampat (Berar).—Land held on payment of a quit-rent, but not necessarily hereditary.

Parpattigar (Coorg).—A revenue officer in charge of a sub-division of a taluk.

Patel (Coorg).—Village headman appointed by Government.

Peshkash (Madras).—The fixed land revenue payable to Government on all permanently-settled estates.

Poramboke (Madras).—Lands reserved for public or village communal purposes.

Pôt ináms (Bombay).—Lands sub-alienated in alienated villages.

Pôt kharáb (Berar).—The unculturable area included in a survey number.

Shanbóg (Coorg).—A village accountant appointed by Government.

Shrotriem (Madras).—Village held on grant (originally to Brahmins), wholly or partially revenue-free.

Talukdari (Bombay).—A form of proprietary right in force in the northern districts of Bombay.

Thathameda (Upper Burma).—Household tax.

Thekadar (Central Provinces).—A farmer, a leaseholder, a middleman; one who receives the rents from the cultivators and pays a stipulated sum to the proprietor.

Udhad-jamabandi (Bombay).—A proprietary tenure subject to fixed assessment.

Umbli (Coorg).—Lands granted on reduced rates to individuals on account of services rendered to the State by themselves or their ancestors.

TABLE No. 1.—Area.

In this table is entered the total area of each district, the areas for which statistics are and are not available being separately entered.

The corresponding tables of the earlier series are I A—1 of 1866, A of 1884, and A—1 of 1891. The headings differ as set out below :—

1866 I A—1	1884 A	1891 A—I
Total area in square miles	Area according to Survey Department in acres. Deduct— (*a*) Feudatory and Tributary States. (*b*) Area for which returns are otherwise not available. Net area dealt with in this return.	Area according to professional Survey in acres. Deduct— (*a*) Feudatory and Tributary States. (*b*) Area for which no returns exist. Net area by professional survey. Corresponding area in village papers.

GENERAL NOTES.

Column 2 (*pages 13—15*).—The professional survey is that carried out by the Survey of India in Northern India, and by the corresponding departments in the Southern Presidencies. The provincial areas in this column exclude Native States in direct political relations with the Government of India, but include Feudatory or Tributary States politically controlled by Local Governments, with the exception of the Manipur State in Assam, and the Chin Hills, the Pakkoku-Chin hills, and the Shan States in Burma.

In *column 3* is entered the area of any Feudatory or Tributary States included in column 2,

Column 4.—In this column is deducted the entire area (exclusive of Native States) for which the statistics required for tables Nos. 2 and 3 are not forthcoming in whole or in part. This area comprises chiefly estates held in permanent settlement or on privileged tenure, which have not been cadastrally surveyed and which possess at present no agency for the annual collection of agricultural statistics. As surveys extend and the organisation of village statistical establishments developes, the area in this column is reduced, and that entered in the next columns (5 and 6) and dealt with in tables Nos. 2 and 3 correspondingly increased.

Columns 5 and 6.—Column 5 is a check on the accuracy of column 6. In the latter "village papers" means "the papers prepared by the village accountants." They do not in several provinces relate to the whole area included in column 5; for instance, the village returns often do not include the forest areas. In such cases, column 6 must be taken to be the total area for which statistics are available, corrected by the village papers in respect of the areas for which such papers exist. The areas of provinces and districts which are calculated from village papers are necessarily somewhat different from those given by the Survey Department, (*a*) because, while the survey area of a district or province is calculated in block, the area by village papers represents the added total of field and village areas; and (*b*) because the system followed as regards the inclusion or exclusion of areas covered by water, buildings, roads, and railroads, is not uniform in the two sets of returns.

In provinces where no village papers exist, the figures in column 5 have been repeated in column 6. In that case they represent the area of which the details are stated in columns 2 to 6 of table No. 2.

PROVINCIAL NOTES.

Upper and Lower Burma.

Column 2 (*pages 16—19*).—Where there has been no professional survey of the district the best information available is accepted, subject to revision from time to time as surveys extend.

Assam.

Columns 4 to 6 (*pages 21*).—Column 4 states all the hill districts, all permanently settled and *lakhiraj* estates, and areas which have not been cadastrally surveyed in Cachar and Sylhet, except—(1) reserved forest areas, and area under tea; (2) estimated cultivated areas in the permanently settled estates in Sylhet and Goalpara shown in Table 3; and (3) the plains portion of the Garo Hills district. From 1898-99 the area under crops in the permanently settled tracts of Sylhet and Goalpara has been estimated and included in columns 5 and 6; but in 1900-01 and 1901-02 the estimate for the permanently settled portion of Goalpara being unreliable was excluded from these two columns and included in column 4.

Eastern Bengal.

The statistics shown under Eastern Bengal deal with the 15 districts transferred from Bengal and combined with the old province of Assam to form the new province of Eastern Bengal and Assam. The figures for the Assam districts have been kept separate from those of the Eastern Bengal districts.

The area cadastrally surveyed is limited to 5,130,240 acres, which is only about 19 per cent of the whole area of Eastern Bengal (exclusive of Native States).

Columns 2 and 3 (*pages 22—23*).—Hill Tippera has been entered under a separate head as Feudatory State.

Column 4 shows the whole area of the Chittagong Hill Tracts for which no returns are available.

The statistics for Bengal published in this volume deal for the first time with the 33 districts of Bengal, as newly constituted, that is, excluding the 15 districts transferred to Eastern Bengal and Assam, and including Sambalpur transferred from the Central Provinces to Bengal. *Bengal.*

The area cadastrally surveyed is limited to 25,052,458 acres, which is about 34 per cent of the area of the province (exclusive of Native States).

Columns 2 and 3 (*pages 24—27*).—Since 1894-95 Sikkim, Cooch Bihar, and the Tributary States in Orissa and Chota Nagpur, have been classed under a separate head as Feudatory States.

Column 4 (*pages 28—32*) includes the area of hill districts and some portions of Jhansi, Mirzapur, and Ballia which possess no agency for collecting statistics. It also includes the area of the family domains of the Maharaja of Benares situated in the Benares and Mirzapur districts. *United Provinces.*

Column 2 (*page 33*) states the area as given in the settlement records. *Ajmer-Merwara.*

Column 2 (*page 14*).—There is no record of area according to professional survey. The area stated is that of the whole pargana including jagir and inám villages as given in the settlement records. *Manpur.*

Column (*4 pages 34—36*) represents except in Simla and Kangra the area in river beds not hitherto accounted for in the revenue papers: in Simla and Kangra the figures refer to high mountainous tracts. *Panjab.*

Column 2 (*page 33*) represents the area of feudatory states in Hazara districts, which was formerly shown in column 4 as area for which no returns exist. *N.-W. Frontier.*

Column 2 (*pages 37—39*) states the area as returned by the provincial revenue survey and settlement department, supplemented in the case of Native States by the returns of the topographical survey. The revenue survey being incomplete in Sind, the exact area of that province is not known: the column states the area of surveyed tracts *plus* the estimated area of unsurveyed tracts. *Bombay and Sind.*

Column 4.—Statistics are not available for villages which have not come under the operations of the revenue survey, and therefore the areas of all unsurveyed villages are excluded by deduction in this column.

Column 6.—The figures of column 5 are repeated because the areas in village papers are derived from the revenue survey records.

Column 4 (*pages 40 and 41*) includes the unsurveyed areas of zamindari* estates and waste land grants. *Central Provinces.*

Column 6.—The area for which accurate statistics are available is steadily increasing, and until the survey is complete and resettlement finished, there will always be changes which render comparison difficult.

Column 2 (*page 42*) states the area as ascertained by the local survey and settlement department. *Berar.*

Column 2 (*pages 43—45*) states the area as ascertained by the provincial survey department supplemented, for tracts which have not come under the operations of that department, by areas calculated from the returns of the topographical survey. *Madras.*

Column 4 includes chiefly areas of zamindaris, or large proprietary estates permanently settled, which have not been cadastrally surveyed and possess no adequate agency for the collection of statistics. The area of these estates comprises roughly three-tenths of the total area of the British districts of the Presidency; but from 1901-02 some of the estates under the Court of Wards and private European managers, which have furnished returns, have been excluded from this column, and included in columns 5 and 6. Column 4 also includes (1) the area of the agency tracts in the districts of Ganjam and Vizagapatam, excluding the small sub-division of Chokkapad Kondam in the former district, and the extent of Government land and of some whole inam villages in the latter; (2) the area of some of the whole inam villages in Ganjam, Vizagapatam, Guntur, Nellore, and South Arcot, and all the whole inam villages in Salem; (3) the area of Chimakurti hill and a small piece of some other Government land in Guntur; (4) the area of Madras town and district in which cultivation accounts are not maintained; and (5) the area of the Amindivi Islands in South

---

* In the Central Provinces the zamindars are chiefs of minor importance (or their successors) who, while holding large and compact estates on privileged tenure, have been restricted to the rank of ordinary subjects.

Canara. Thus, the total area (23,876,018 acres) entered in this column for 1905-06 comprises (1) zamindari estates 22,849,280 acres, (2) whole inam villages 515,009 acres, and (3) raiyatwari villages (including the minor inam holdings) 511,729 acres.

Columns 5 and 6.—Formerly these columns wholly excluded the zamindari estates for which statistics were not available, but from 1901-02 figures for a portion (about a sixth in 1905-06) of these estates have been obtained and included. It should, however, be borne in mind that the statistics both for zamindaris and whole inam villages are based on estimates of doubtful value and are therefore not comparable for accuracy with those for raiyatwari and minor inam villages which are collected by adequate agency employed for the purpose. Column 6 also includes the area of unsurveyed lands roughly estimated in all districts, the agency tracts in Godavari, and also the portions of such tracts in Ganjam and Vizagapatam not included in column 4. Of the total area (66,907,301 acres) entered in column 6 for 1905-06 zamindari estates cover 4,400,119 acres, whole inam villages 3,088,759 acres, and raiyatwari and others 59,418,423 acres.

(*a*) The area of Kamptee cantonment

(*b*) In 1905-06 the major portion (about 78 per cent.) of the Sambalpur district was transferred from the Central Provinces to Bengal. The remaining portion, together with the districts of Raipur and Bilaspur, was formed into the three districts of Drug, Raipur and Bilaspur. The figures for the years 1901-02 to 1904-05 for the whole of the old Sambalpur district are shown in the tables for Bengal in this volume.

* See explanation given in the Explanatory Notes (page 11)

* See explanation given in the Explanatory Notes (page 11)

TABLE No. 2—Classification of Area.

The first part of this table deals with the classification of the area entered in column 6 of table No. 1, and gives the proportions (columns 2 and 3) withdrawn from cultivation by inclusion under forests or for some other reason, (4) cultivable land available but not yet taken up, (5) land occupied but not under crop during the year of report, (6) the net area under crop, that is, after deduction of the area cropped more than once in the year. The second part (columns 8 to 13) gives the area irrigated from various sources, and (columns 14 to 18) the distribution of the irrigated area under specified crops.

The headings altered since 1866 are noted below:

1866 I A—1	1884 A	1891 A—2
Cultivated	Actually cropped	Net area cropped.
	Current fallows	Current fallows.
Culturable	Available for cultivation	Culturable waste other than fallow.
Unculturable	Not available for cultivation.	Not available for cultivation.
Unappropriated cultivable waste.	(Omitted)	(Omitted).
Communications	(Omitted)	(Omitted).

GENERAL NOTES.

Column 2 (pages 50 and 52).—"Forests" means in the statements of 1891 "any land classed or administered as forest under any legal enactment dealing with forests," and in those of 1884 all Government forests and forests administered under any Forest Act. Any cultivated areas existing within such forests may be excluded and entered in column 6 (net area cropped), an explanation being given in a note.

The forest areas do not agree in most cases with those stated in the reports on the administration of the Forest Department for various reasons, amongst which are these: (1) because the forest administration reports and the statements of agricultural statistics relate in many cases to different periods, (2) because the administration reports relate exclusively to forests worked by the Forest Department, while the tables of agricultural statistics exhibit in addition forest areas administered by district officers, and (3) because, on the other hand, certain forest areas worked and returned by the Forest Department are not included in the areas for which village papers exist, and are therefore excluded from these tables.

Column 3 includes all land absolutely barren, and also all land covered by buildings, water, roads, or otherwise appropriated to uses other than agriculture.

Column 4 includes groves not classed in the cropped area. From 1901-02 areas under bamboos and thatching grass, when not forming parts of forest areas, are included in this column.

Columns 8 to 13 (pages 50—53) state the area actually irrigated during the year, areas cropped more than once being counted once only.

Columns 14 to 18 (pages 51 and 53) state the gross area of irrigated crops, areas cropped more than once being counted as separate areas for each crop.

The excess in some cases of the total area of crops irrigated (column 18) over the total area irrigated (column 13) is thus due to the inclusion in column 18 of the area irrigated at both harvests.

PROVINCIAL NOTES.

Upper and Lower Burma.

Column 2 (pages 54—60).—The area entered in this column is that given in the forest administration report, and includes reserved forests and fuel reserves. The figures for Upper and Lower Burma taken separately differ somewhat from those in the forest administration reports because of the difference in the manner of partition of the Thayetmyo district between the two divisions of the province.

Column 3.—In settled tracts the unculturable area is taken from settlement registers, but in unsettled tracts it is obtained from the best source available.

Column 4 includes land thrown out of cultivation and abandoned. Groves, not classed in the cropped area, and bamboos, when not grown in forest areas, are also included in this column.

Column 5 includes only such land left uncultivated as is actually in possession of cultivators. In Lower Burma such lands are assessed at privileged rates, but in Upper Burma no assessment is levied on land left uncultivated.

Columns 14 to 18 include only crops actually irrigated; for instance, where an unirrigated crop of sesamum is taken off land which is afterwards irrigated and planted with paddy, the area grown with sesamum is not included in this column.

Column 2 (*page 62*).—"Forests" formerly included protected and reserved forests. Since 1893-94 reserved forests only have been entered. The figures differ slightly from those in the forest administration report because of the difference in the period embraced in the two statements. *Assam*

Column 5 includes generally all lands which are thrown out of cultivation or not cultivated, but remain in the occupation of leaseholders. For the hill districts (including North Cachar Hills) no figures can be given except for the plains portion of the Garo Hills district. In Sylhet which is mostly permanently settled, figures are available only for the uncultivated portion of tea estates not examined and surveyed and of all kinds of settled estates in the area cadastrally surveyed in the Jaintia Parganas and Partabgarh.

Columns 8 to 18.—There is practically no artificial irrigation. The small area irrigated from hill streams has never been distinguished from other cultivation.

Column 2 (*pages 64—66*).—The figures represent Government forests only. There is a difference between these and the corresponding areas in the forest administration report, owing to the exclusion from the former of the forest areas in the Chittagong Hill Tracts. *Eastern Bengal.*

Columns 3 and 4 include private forests and unclassed State forests.

Columns 8 to 18.—No figures are available of areas irrigated except for certain cadastrally surveyed tracts.

Column 2 (*pages 68—74*).—Since 1893-94 the figures represent Government forests only. There is a difference between these and the corresponding areas in the forest administration report, owing to the inclusion in the former of 15 villages in the Sambalpur district, which have been taken up by the Forest Department but which have not yet been included in the forest return. *Bengal.*

Columns 3 and 4 include private forests and unclassed State forests.

Columns 8 to 18.—Since 1898-99 the areas and crops irrigated from Government canals are stated; no figures are available of areas irrigated from other sources except for cadastrally surveyed tracts.

Statistics have been repeated for certain districts as information could not be collated owing to the employment of the village accountants in a revision of the records (including sometimes a resurvey) of the districts. *United Provinces.*

Column 2 (*pages 76—84*) includes areas administered by the district officers of some districts. Hence the figures do not agree with those in the forest administration report.

Column 5.—The maximum period for which land left untilled is reckoned as fallow is three years.

Columns 8 to 13.—Government canals include private canals except in Naini Tal, for which district separate figures for private canals have been obtained since 1895-96. From 1903-04, however, the areas irrigated from certain private canals in Basti which were formerly included under "other sources" have been shown under the proper head "private canals." There are very few private canals in the United Provinces.

Column 2 (*page 86*).—The forest area relates to khalsa, jagir, and minor istamrár villages, but excludes village lands managed by the Forest Department which do not technically constitute Government forests. *Ajmer-Merwara.*

Column 2 (*page 50*).—The forest area relates to Government forests including those in jagir lands. *Manpur.*

Column 6 includes the area cropped in khalsa (Government) as well as in jagir villages.

Column 2 (*pages 88—94*) includes all lands specially allotted to forest growth under the control of Government or any Local Board or Municipality. *Panjab.*

Column 4 includes large areas of Government waste not allotted for cultivation.

Column 5.—The maximum period for which land is reckoned as fallow is two years; but, as a change in classification is not generally made until the year for quadrennial statements comes round, the old classification may be retained from one to three years longer than the prescribed period. In certain districts in the south-west of the province, however, the classification is amended annually. Previous to 1901-02 this column also included the lands on which the crops wholly failed, as well as a fraction of those on which they partially failed proportionate to the degree of the deficiency.

Column 6.—For the years previous to 1901-02 the area represented is that on which the crops harvested would have been grown in a year of normal productiveness. That is to say, each of the returns of the actual areas from which crops were taken was multiplied by a fraction representing the relation of the crop harvested to a normal crop, and the difference between this product and the actual area was added to the fallow area. From 1901-02,

however, the area sown has been reported without reference to the area harvested or the condition of the crops.

Columns 8 to 18 state the gross area irrigated, that is, land irrigated in both seasons is counted twice.

N.-W. Frontier.

Column 2 (*page 96*) includes all lands specially allotted to forest growth under the control of Government or any Local Board or Municipality, and protected village waste in Hazara administered by the district officer and other waste lands in Peshawar.

Column 4 includes large areas of Government waste not allotted for cultivation.

Column 5.—The maximum period for which land is reckoned as fallow is two years; but, as a change in classification is not generally made until the year for quadrennial statements comes round, the old classification may be retained from one to three years longer than the prescribed period. In Dera Ismail Khan classification is amended according to area of each class of soil actually cultivated each year.

Columns 8 to 18 (*pages 92—93*) state the gross area irrigated, that is, land irrigated in both seasons is counted twice.

Sind.

Column 2 (*page 98*).—The figures do not agree with those in the forest administration report, because the revenue records do not state the most recent alterations of area due to erosion by the Indus which the forest report does, and because, on the other hand, the forest report does not always exhibit the most recent alteration of area effected by the revision survey, which the revenue records do.

Bombay.

Column 2 (*pages 100—102*) includes land administered by the Forest Department whether formally declared forest under an Act or not, and differs from the area stated in the forest reports, because in certain localities, where the forest settlement is incomplete, the original areas are still returned by the Forest Department, while revised areas are returned in this table; also because the revenue records do not always state the most recent revisions.

Column 3 includes all land recorded at the survey and settlement as unculturable, though at times a very small quantity of this land are cultivated.

Column 5.—The maximum period for which land thrown out of cultivation is reckoned as fallow is ten years.

Columns 8 to 13.—The figures given for private canals, tanks, wells, and other sources are rough estimates.

Column 16.—By "miscellaneous food crops" are understood the crops entered in table No. 3, as sugar, orchards and garden produce, and miscellaneous food crops.

Central Provinces.

Column 2 (*pages 104—106*) differs from the figures in the forest administration reports because the actual area of the forests is not known owing to incomplete survey, also because excisions made have not yet been taken note of in the forest registers, and because in many cases raiyatwari villages settled, thekadari villages surveyed, clearance lease villages earned in proprietary rights, and villages purchased under the waste-land sale rules, have not as yet been finally disforested and struck off the forest registers.

Column 3 states areas covered with water, hill, or rock, and land occupied by buildings and roads.

Column 4 states (1) the waste area within holdings (including fallows of more than three years), (2) land under tree forest which is not administered under any Act dealing with forests, (3) land under scrub jungle or grass, and (4) groves not included in holdings.

Column 5.—Land which has been fallow for not more than three years is reckoned as current fallow.

Berar.

Column 2 (*page 108*) includes the forest area administered by the Forest Department, but excludes a large area of cultivated land in the Melghat taluk in Ellichpur shown as forest in the forest report.

Column 3 includes village sites and land taken up for public purposes or devoted to uses other than agriculture; it also includes unculturable portions of culturable fields.

Column 4 includes land available for cultivation but not given out.

Column 5 includes occupied culturable land left fallow for private reasons, such as grazing, rotation, etc.

Madras.

Column 2 (*pages 110—112*) includes from 1895-96 the area cultivated within forests, and excludes the area of forests in the Native State of Sandur, in Bellary, not included in the village papers. As this is included in the forest administration report, it accounts partly for the disagreement of its figures with those in this table.

Column 5 includes all occupied waste, that is to say, waste portions of land for which revenue is paid.

Column 6.—Of the total net cropped area for 1905-06 (26,411,306 acres) stated in this column, zamindari estates have 1,414,944 acres, whole inám villages 1,242,472, and raiyatwari and others 23,753,890 acres.

Column 10.—The term "tanks" refers to a particular kind of dammed reservoirs.

Column 13.—Of the total area irrigated in 1905-06 (7,010,350 acres), 932,473 acres belong to zamindari estates, 438,903 to whole inám villages, and 5,638,974 to raiyatwari and others.

Columns 14 to 18 (crops irrigated) have been discontinued since 1898-99.

Column 2 (page 52) includes reserved and protected forests only. The management of the latter having been transferred to the revenue authorities, the figures shown in the forest administration report represent the area of reserved forests, which slightly differ from those adopted for this table because the periods embraced are different. *Coorg.*

Column 3 includes unculturable Government waste and unculturable *banés*.

Column 4 states the estimated area of culturable Government waste.

Column 5 shows (1) the estimated area of culturable *banés*, and (2) the difference between the net area cropped and the gross area of the actual holdings (exclusive of *banés*). It thus includes the unculturable lands within the actual holdings, the area of which cannot be ascertained.

Columns 8 to 13.—Figures for land partly irrigated from springs and mountain streams are not available.

* See explanation given in the Explanatory Notes (page 48)

(*a*) In 1905-06 the major portion (about 78 per cent) of the Sambalpur District was transferred from the Central Provinces to Bengal. The remaining portion together with the districts of Raipur and Bilaspur was formed into the three districts of Drug, Raipur, and Bilaspur. The figures for the years 1901-02 to 1904-05 for the whole of the old Sambalpur district are shown in the tables for Bengal in this Volume.

* See explanation given in the Explanatory Notes (page 48)

NOTE—Up to the year 1904-05 Berar was divided into six districts. In 1905 the number was reduced to four; but no change was made in the external boundaries of Berar.

(a) Includes Government canals in certain zamindari areas
(b) No irrigation works
(c) Statistics of irrigation are not collected
* See explanation given in the Explanatory Notes (page 49)

TABLE No. 3—Area under Crops.

This table states the gross cultivated area under each crop, irrespective of irrigation and double-cropping, the area under the latter being included in the statement, but subtracted in column 41. The area is that stated in column 6 of table No. 2.

The headings which have been modified since 1866 are—

1866 III D—1	1884 B	1891 A—3
Other food-grains	Other food-grains, including pulses	Barley. Cholam or jawar. Cambu or bajra. Ragi or marua. Maize. Gram. Other food-grains, including pulses.
Oilseeds	Oilseeds	Linseed. Til or jinjili. Others.
Sugar	Sugarcane	Sugarcane. Others.
Fibres	Cotton	Cotton.
	Jute	Jute.
	Others	Others.
Vegetables	(Omitted)	(Omitted).
Opium	„	Opium.
——	Cinchona	Cinchona.

The following items were added in 1891 :—

Condiments and spices.
Other dyes.
Indian hemp.
Other drugs and narcotics.
Fodder crops.
Orchards and garden produce.

Since 1899-1900 rape and mustard have been separated from the head "other oilseeds."

GENERAL NOTES.

In 1896 the Government of India decided that in this table should be entered the areas actually sown, whether the crop comes to maturity or not, except in cases when fields, owing to the failure of the first sowings, have been devoted to other crops: in such cases the area first sown should be omitted.

Previous to this decision there was no uniformity of practice. The figures in the tables represented: for Madras, Ajmer-Merwara, and Pargana Manpur the area sown or placed under crop; for Bombay the area sown, but any area on which the crop failed was treated as unsown; for the United Provinces the total cultivated area exclusive of the double cropped area and the area on which *kharif* (autumn) sowings failed; for Bengal, the Panjab, and the Central Provinces the area from which crops were actually taken. Again, in Assam, Berar, and Mysore, the area sown or placed under crop was stated for some districts, while for others the figures represented the area from which crops were actually taken. In Coorg neither the area sown nor the area actually cropped was stated: but all wet land paying assessment as cropped was entered.

In cases where two or more crops are grown together, an estimate is made of the area covered by each, and the areas so estimated are separately returned. The estimate is made by the village accountant, or is subsequently determined on formulæ prescribed by the provincial authorities.

Columns 10, 15, 19, 22, 27, 34, 38, and 39 (*pages 116—121*).—The selection of crops for inclusion in these columns is left to the provincial authorities.

Columns 29 and 30 (*pages 118 and 122*).—The areas stated under "Coffee" and "Tea" differ in certain cases especially in Madras from those given in the special detailed statements Tables 7 and 8. The principal reason is that tables 7 and 8 are prepared from returns received from managers and owners of states; and these returns especially in Southern India are inaccurate and defective. Minor discrepancies are also due to the fact that the figures in table 3 deal with the agricultural year; while those in tables 7 and 8 deal with the calendar year. On the other hand tables 7 and 8 contain estimates for the acreage under tea and coffee in certain areas for which other agricultural statistics are not forthcoming.

The variations in the areas shown in different years under the same crop in the same district do not in all cases represent an actual increase or decrease in the area under that crop. In certain cases a revised classification or the correction of a faulty estimate is responsible for the change.

PROVINCIAL NOTES.

The table states the actual area sown, including the area on which crops have been destroyed, but excluding fallow. Land on which more than one crop has been grown is entered as a separate crop area. *Upper and Lower Burma.*

In Cachar accurate statistics of the area under crops other than tea is available only for the cadastrally surveyed tracts, in Sylhet only for the Jaintiá Parganas and Partabgarh, and in Goalpara only for the temporarily settled tracts. Until 1895-96 the figures for the five upper districts of the Assam valley related only to tracts cadastrally surveyed, and to *khiraj* lands and tea estates not cadastrally surveyed. Since that year the whole cropped area in these districts has been stated, with the exception of a small area cultivated by tribes paying house or poll-tax in Lakhimpur, Sibsagar, and Kamrup. The figures from 1898-99 include an estimate of the area under crops in the permanently settled tracts of Sylhet and Goalpara, but those for 1900-01 and 1901-02 include an estimate of such area in Sylhet only. In the Garo Hills district the areas under different crops are available for the plains tracts only. No statistics are available for the other hill districts. *Assam.*

Column 37 (*page 143*).—The area under orchards and garden produce includes village sites.

As no statistics are at present prepared by village or circle officers, the figures entered in this table are merely estimates, except those for Chittagong and Backerganj, in which the estimates are based on the figures collected during the cadastral survey. *Eastern Bengal.*

No statistics are at present prepared by village or circle officers except in the Sambalpur district. The figures for all other districts entered in this table are therefore merely estimates, except those for Sáran, Champáran, Muzaffarpur, Darbhanga, Puri, Cuttack (exclusive of small permanently settled areas), Balasore, Angul, and the Santhal Parganas, in which the estimates are based on the figures collected during the cadastral survey. *Bengal.*

The area sown with unimportant mixed crops, for which no separate heading is provided in the provincial crop statements, is assigned to the principal crop by the village accountant. The areas of important mixed crops, namely, wheat and barley, wheat and gram, barley and gram, jawar and arhar, bajra and arhar, and cotton and arhar, for which separate headings are provided in the crop statements, were included until 1893-94 with "other food-grains including pulses." Since 1894-95 they have been distributed in accordance with prescribed formulæ and entered under the crops of which they are composed. In the Almora and Garhwal districts no statistics of crops other than tea are available since 1895-96. *United Provinces.*

Columns 3, 4, 9 and 11 (*pages 168—190*).—The whole of the area of the land planted with food-grains (wheat, barley, gram, etc.,) mixed with oilseeds is shown under food-grains in this table. The area shown under food-grains which was really planted with oilseeds (as a mixed crop) is roughly estimated to have been 3,293,000 acres in the whole of the United Provinces of Agra and Oudh in 1905-06.

Columns 12, 13, 14 and 16 (*pages 169—191*).—The figures shown in these columns represent areas under "pure" oilseeds, *i.e.*, oilseeds sown unmixed with any other crop. Besides these, the oilseeds are thinly sown in combination with wheat, barley, gram, and other crops. If the areas occupied by the scattered plants were added up, it is estimated very roughly that they would amount in 1905-06, (for the whole of the United Provinces of Agra and Oudh) to 567,000 acres of linseed, 700,000 acres of sesamum and 2,026,000 acres of rapeseed.

Statistics have been repeated for certain districts as information could not be collated owing to the employment of the village accountants in a revision of the records (including sometimes a resurvey) of the districts.

The areas stated are actual areas sown or placed under crop in Government and jagir villages. *Manpur.*

The figures in columns 2 to 39 (*pages 200—215*) do not represent the actual acreage, but the area of each harvest reduced to a conventional standard of normal productiveness. That is to say, each of the returns of the actual areas from which crops are taken is multiplied by a fraction representing the relation of the crop harvested to a normal crop. From 1901-02 the figures in column 40 represent the area sown without reference to the area harvested and the condition of the crops; and they therefore differ from the totals of columns 2 to 39. This difference was 7,582,516 acres in 1901-02, 5,759,719 acres in 1902-03, 3,921,395 acres in 1903-04, 4,313,157 acres in 1904-05, and 6,383,136 acres in 1905-06. *Panjab.*

In future the areas actually sown will be shown in all the columns.

As in the Panjab, the areas under each crop (*pages 216—219*) are not actual areas, and similarly the total in column 40 exceeds the sum of the details in columns 2 to 39. This excess was 679,488 acres in 1901-02, 479,093 acres in 1902-03, 420,824 acres in 1903-04, 321,362 acres in 1904-05, and 410,722 acres in 1905-06. *N.-W. Frontier.*

In future the areas actually sown will be shown in all the columns.

Column 37 (*pages 237 and 239*) includes groves situated within the home farm of the landlord or the holding of a tenant. *Central Provinces.*

Column 36 (*pages 251—253*) states the areas sown with grass and crops solely for fodder. Lands left waste for grazing and on which grass grows spontaneously, are not included in this column. *Madras.*

Column 32 (*page 122*).—The cultivation of cinchona has to all intents been entirely abandoned in Coorg. *Coorg.*

(*a*) In 1905-06 the major portion (about 78 per cent) of the Sambalpur district was transferred from Central Provinces to Bengal. The remaining portion together with the district of Raipur and Bilaspur was formed into the three districts of Drug, Raipur, and Bilaspur. The figures for the years 1901-02 to 1904-05 for the whole of the old Sambalpur district are shown in the tables for Bengal in this volume.

* See explanation given in the Explanatory Notes (page 115)

TABLE No. 4—Live-stock, Ploughs, and Carts.

This table deals with agricultural stock. The headings of the form now in use differ from those of 1866 and 1884 in the following respects:

1866 III D—2	1884 III D—2	1891 A—4
Cows and bullocks	Cows and bullocks	Bulls and bullocks. Cows.
.....	Buffaloes	Male buffaloes. Cow buffaloes.
.....	.....	Young stock (calves and buffalo calves).
Horses Ponies	Horses and ponies	Horses and ponies.
Donkeys	Mules and donkeys	Mules and donkeys.
Sheep and goats	Sheep and goats	Sheep. Goats.
.....	.....	Camels.

In most provinces mules have been separately enumerated since 1899-1900.

GENERAL NOTES.

In some provinces the figures include, and in others exclude, animals in towns, cities, and cantonments. The Government of India decided in 1896 that live-stock in cities and cantonments should be included wherever it is possible to secure their enumeration, and that oxen and buffaloes not old enough for work or to produce young should be treated as "young stock."

The figures generally are greatly lacking in accuracy.

PROVINCIAL NOTES.

Upper and Lower Burma. The figures of live-stock in Upper and Lower Burma were collected until 1897-98 by thugyis or headmen when preparing the capitation tax or *thathameda* (household tax) rolls, or when required for the statement. Cattle were not counted on any particular day.

Since 1898 annual statements of cattle and agricultural implements have been prepared in Lower Burma, during the field season, by circle thugyis and revenue surveyors.

The figures include all animals in towns and also those employed in each district by Government departments, such as transport, military, police, and by municipalities.

Assam. The statistics are based on a cattle census taken every five years. The census is, however, not taken at one time throughout the province.

In the Assam Valley Districts (excluding the permanently-settled tracts of Goalpara) the last census was taken in 1904. In Cachar it was taken in 1902, and in the Garo Hills (plains portion only) in 1903.

In Sylhet the last census was taken in 1904 in the Jaintiá Parganas only; for the rest of the district an estimate was made on the assumption that the proportion between cattle and population found in the Jaintiá Parganas holds good in the rest of the district.

Eastern Bengal. Statistics of live-stock are collected only in tracts where surveys are being made or a record of rights prepared. The figures, however, are not collected each year, but for each tract when the tract is under survey.

Bengal. Statistics of live-stock are collected only in tracts where surveys are being made or a record of rights prepared. The figures, however, are not collected each year, but for each tract when the tract is under survey. In the present table figures have been given only for the seven districts of Champaran, Muzaffarpur, Sáran, Darbhanga, Balasore, Angul, and Puri, of which the whole area has been cadastrally surveyed.

United Provinces. Until 1897-98 the figures of live-stock were obtained by an annual census made by the patwari when he made his round for the record of the spring crops. A rough record of the detail for each tenant was made by the patwari and tested from time to time by the kanungo. The resultant totals were preserved in the patwari papers. The table is now prepared quinquennially on a census in each district taken every five years. The last census was taken in 1903-04 in all the districts, except Almora and Garhwal, under the supervision of the superior kanungoes and such members of the district and tahsil staff as could be spared. For Almora and Garhwal the figures collected in the previous census of 1898-99 were retained. The figures obtained by the quinquennial census are believed to be more accurate than the earlier figures.

The table is prepared quinquennially, and the figures were last collected in 1903-04. *Ajmer-Merwara.*

An annual census is taken on the 15th March. *Manpur.*

Until 1897-98 the table was based on figures furnished by patwaris who made an enumeration of the cattle in a village every fourth year, when a detailed jamabandi was prepared. The enumeration was not made on a particular day, but whenever the patwari found time for it, between April and August. The result was that in a fourth of the province an enumeration was made every year, and the fresh figures for that fourth part were incorporated in the annual statement by subtracting from the preceding year's figures the old statistics and adding the new figures. This system has been replaced by a census for the whole province to be taken every fifth year in the first week of February. The last census was taken in February 1904. *Panjab.*

Until 1896-97 stock in cantonments was excluded except in Lahore. Since that year cattle in cantonments and municipalities have been included; and since 1897-98 all cattle belonging to Government have been included.

A census for the whole province is taken every fifth year in the first week of February. The last census was taken in 1904. All cattle belonging to Government were included. *N.-W. Frontier.*

Until 1901-02 the figures were collected annually by village officers at a house-to-house enquiry in June. In that year it was decided that they should be collected once in five years, and the first quinquennial return of live-stock was prepared for 1905-06. The next return will be due for 1910-11. *Bombay.*

All animals belonging to a family are entered against the name of the head of the family even though the animals are temporarily absent from the village. Animals belonging to other villages are excluded, and those belonging to a roving grazier who has no permanent residence are noted, but are not included in the village resources. The figures are regularly tested by circle inspectors (kanungoes).

Stock statistics are not collected in the city of Bombay.

The figures were collected for the first time in 1899-1900; and, as in Bombay, it was decided in 1901-02 that they should be collected once in five years, and the first quinquennial return of live-stock was prepared for 1905-06. *Sind.*

The figures are collected annually, between the 1st January and the 15th March, by the patwaris for the areas in their charge. The total figure is recorded in the tahsil by the kanungo in a village register. The patwari includes all animals which belong to residents of the village, even though they are temporarily absent (*e.g.*, for grazing), and excludes animals which are temporarily in the village for grazing or other purposes, but do not belong to residents. Since 1896-97 stock in cities, large towns, and cantonments is included. *Central Provinces.*

A census is made annually by the village officers.

All cattle belonging to one owner are entered against his name, even though the animals are temporarily absent from the village. When an owner cultivates land in more than one village, the actual number in each particular village on the night of enumeration is entered in the statement for that village. Cattle belonging to other villages, but temporarily in the village for grazing, are not entered in the statement for that village. *Berar.*

Previous to 1884 a census was taken every five years. From that year until 1898-99 a census of cattle in Government villages was taken annually, but it was then decided to revert to the former practice and take a census every five years. The last quinquennial census was taken in 1904-05. In inám villages, however, there is no suitable agency for the work, and Collectors obtain information for these villages as best they can: it is not known to what extent any census is made in them. No information exists regarding live-stock in permanently-settled (zamindari) estates. *Madras.*

The table includes stock statistics of all towns and cantonments except those in zamindaris, and those which do not form part of any revenue village and where the statistics are not collected because there is no agency for the purpose.

The table is prepared quinquennially on a census taken every five years. *Coorg.*

The last census was taken in March 1905 by the circle shanbogs, and the particulars entered in a register maintained under Rule 73 of the Rules framed under the Coorg Land and Revenue Regulation, 1899.

Animals in municipal towns are included.

TABLE No. 5—Land Revenue

This table is intended to indicate the relation between area, population, and land revenue, or in other words, to exhibit the mean burden of the State assessment on the land assessed to it and on the community at large. It was prescribed in 1884, and revised in 1893. Similar information previous to 1884 is contained in Tables ID, IE—2, and IE—6, appended to the General Administration Reports.

The two main classes of tenure, (1) raiyatwari and (2) zamindari and village communities, specified in 1884, were not exhaustive, and the provincial administrations were allowed to make additions in accordance with local requirements. The table now states all tenures under one or other of three heads, namely, (1) raiyatwari, (2) zamindari and village communities (temporarily settled), and (3) zamindari (permanently settled).

The present form differs from that prescribed in 1884 in the following respects :—

1884	1893
I.—(1) Raiyatwari (2) Zamindari and village communities	(1) Raiyatwari. (2) Zamindari and village communities (temporarily settled). (3) Zamindari (permanently settled).
II.—Deduct area not fully assessed, including estates assessed at privileged rates.	Deduct (*a*) Area not fully assessed. (*b*) Area for which the returns required for this table are not available.
III.—Balance of area fully assessed.	Balance, that is, fully assessed area for which returns are available. (*a*) Total. (*b*) Cultivated.

GENERAL NOTES.

In July 1893 the following rules were prescribed for filling in this table :—

Entry 1 in general table No. 5 (pages 282—287), column 2 in provincial tables Nos. 5 (A to O) (pages 294—320).

The varieties of tenure entered should be included, as far as possible, under one or other of the following heads, namely, (1) raiyatwari, (2) zamindari and village communities (temporarily settled), and (3) zamindari (permanently settled).

Entry 2 (a) in general table (pages 282—287), column 3 (a) in provincial tables (pages 294—320).

Areas held revenue-free or at privileged rates should be deducted, but the deduction need not be made where such areas are in any case less than an entire village, and where there is any difficulty in estimating the corresponding deduction to be made in the population head 10 (column 11). In the Madras, Bombay, and Berar tables all land on which a full assessment has not been leviable during the year (for instance, assessed unoccupied land) should be classed for the purposes of this column as "area not fully assessed." Areas should not be entered in this column merely because the assessment due from them has been suspended or remitted on account of short crops, or for other special reasons.

Entry 3 in general table (pages 282—287), column 4 in provincial tables (pages 294—320).

This column should be subdivided into (*a*) total fully assessed area for which returns are available, and (*b*) area cultivated out of the area given in head (*a*). The latter head should be equal to the former after deducting current fallows and fully assessed waste.

Entry 4 in general table (pages 282—287), column 5 in provincial tables (pages 294—320).

Where the land revenue includes the zamindar's share, the net demand should be entered, and the table should state the payments due by the zamindars to Government, not those due by raiyats to the zamindars. The actual realisable demand for the year should be entered, after excluding arrears for past years. Sums remitted on account of unoccupied lands, short crops, etc., should be excluded. This column should include all the heads classed as "Land Revenue" in the Civil Accounts. The practice hitherto followed by the several provinces has not however been uniform, different provinces having entered different items, as stated in the provincial notes.

Entry 7 in general table (pages 288—293), column 8 in provincial tables (pages 295—321).

As in entry 4 (column 5), but only ordinary land revenue on fully assessed areas is to be entered.

Entry 8 in general table (pages 288—293), column 9 in provincial tables (pages 295—321).
To be entry 7 (column 8), divided by entry 3(*a*) [column 4(*a*)].

Entry 9 in general table (pages 288—293), column 10 in provincial tables (pages 295—321).
To be entry 7 (column 8), divided by entry 3(*b*) [column 4(*b*)].

Areas under forest are included in entry 1 (column 2), under the prevailing tenure of the province.

The population in entry 5 (column 6) is that of the last general census.

PROVINCIAL NOTES.

Upper Burma.

Columns 1 and 3 (a) (page 294).—No areas are now classed as zamindari, as no system of communal assessment prevails. Column 3 (*a*) shows grants under Appendices I and II of the Rules under the Upper Burma Land and Revenue Regulation. Before 1902-03 such grants were classed as zamindari (temporarily settled).

Column 3 (*b*) includes non-State lands in districts where no land revenue rates are yet imposed and where the *thathameda* rates have not yet been adjusted.

Column 4 (*a*) contains figures of State and non-State lands assessed to land revenue, including current fallows which are not assessed to land revenue. This column also includes the areas of waste land grants of which the rates have been fixed in perpetuity.

Column 5 states ordinary land revenue, *thathameda*, water rate, rents of fisheries, and items under "Miscellaneous Land Revenue," appearing in the Civil Accounts.

Column 8 (*page 294*) states the ordinary land revenue, as defined in the Civil Accounts, on areas fully assessed.

Column 11.—The population of villages and kwins is considered as belonging to fully or not fully assessed area accordingly as the greater portion of the village or kwin lands are or are not fully assessed.

Lower Burma.

Column 1 (page 296).—No areas are now classed as zamindari, as no system of communal assessment prevails. Before 1893-94, however, all grants made under the waste land rules were classed as zamindari (temporarily settled); and since that year until 1902-03 grants under the waste land rules of Arakan (1839-41), and Pegu (1865), were classed as zamindari (temporarily settled), while grants, under Lord Canning's rules (1863) were classed as zamindari (permanently settled).

Column 3 (*a*) includes special grants which are not yet fully assessed.

Column 3 (*b*) includes old grants exempt from the payment of revenue under special terms.

Column 4 (*a*) states the areas of occupied lands, cultivated or left fallow; it also includes the areas of waste land grants of which the rates have been fixed in perpetuity.

Column 4 (*b*) excludes current fallows.

Column 5 shows ordinary land revenue, rents of fisheries, and the items under "Miscellaneous Land Revenue," appearing in the Civil Accounts.

Column 8 (*page 297*) states the ordinary land revenue, as defined in the Civil Accounts, on areas fully assessed; revenue on fallow areas which are treated as fully assessed is also included.

Assam.

Column 1 (page 298).—*Raiyatwari* includes all unsettled Government waste and forest and areas in which house-tax or poll-tax is levied. *Zamindari* (*temporarily settled*) includes fee-simple grants, wholly or partially revenue-free tenures, and grants under progressive assessment; it also included up to 1901-02 certain temporarily settled estates in Sylhet, but from 1902-03 they have been included under raiyatwari.

Column 3 (*a*) excluded until 1902-03 an area of 21,000 acres of *lakhiraj* land in Goalpara, which was treated as fully assessed area on account of the difficulty of separating its population from that of the permanently-settled estates. It also excluded until 1903-04 about 78,000 acres of uncultivated land in the revenue-free estates.

Column 5 includes all the items falling under the head "Land Revenue" in the Civil Accounts.

Column 6 included the population of the feudatory States in the Khási and Jaintiá Hills until 1900-01, but the figures from 1901-02 represent the population of British territory only.

Column 10 (page 299).—Since 1893-94 the incidence has been calculated on the cultivated portion of the fully assessed area. The cultivated area in the zamindari permanently-settled estates in Sylhet and Goalpara not being known, the incidence could not be ascertained for these estates until 1898-99. Since then the cultivated area in these estates has been estimated; but the estimates for the permanently-settled estates in Goalpara for 1900-01 and 1901-02 were so doubtful that no calculation of the incidence was made from them in those two years. From 1903-04 information has not been available for the cultivated portion of the fully assessed area in Sylhet.

Eastern Bengal.

The table is prepared quinquennially, and the figures were last collected in 1901-02.

Column 1 (*page 300*).—Since 1896-97 the following classification of estates has been adopted:—

(1) *Zamindari* (*permanently settled*) including estates managed for proprietors by Government.

(2) *Zamindari* (*temporarily settled*) comprising (*a*) all temporarily-settled estates, namely, those settled for periods with proprietors, and estates leased to farmers for periods; and (*b*) all estates owned by Government as proprietor.

Column 2 stated until 1896-97 the area of estates borne on the revenue roll of the district, whether entirely situated within the district boundaries or not, and did not include lands of estates partly situated within the district boundaries but borne on the revenue roll of another district. This accounted for the discrepancy between the district areas stated in this column and those entered in table No. 1.

Since 1896-97 the area in this column agrees with the area entered in table No. 1. It represents the total area by survey less the area of Feudatory States.

Column 5 includes all the items falling under the head "Land Revenue" in the Civil Accounts.

Bengal.

The table is prepared quinquennially, and the figures were last collected in 1901-02.

Column 1 (*pages 302—304*).—Since 1896-97 the following classification of estates has been adopted:—

(1) *Zamindari* (*permanently settled*) including estates managed for proprietors by Government.

(2) *Zamindari* (*temporarily settled*) comprising (*a*) all temporarily-settled estates, namely, those settled for periods with proprietors, and estates leased to farmers for periods; and (*b*) all estates owned by Government as proprietor.

Column 2 stated until 1896-97 the area of estates borne on the revenue roll of the district, whether entirely situated within the district boundaries or not, and did not include lands of estates partly situated within the district boundaries but borne on the revenue roll of another district. This accounted for the discrepancy between the district areas stated in this column and those entered in table No. 1.

Since 1896-97 the area in this column agrees with the area entered in table No. 1. It represents the total area by survey less the area of Feudatory States.

Column 5 includes all the items falling under the head "Land Revenue" in the Civil Accounts.

United Provinces.

The table is prepared quinquennially, and the figures were last collected in 1901-02.

Columns 3 (*a*) *and 3* (*b*) (*pages 306—308*) exclude small revenue-free plots, for which details are not forthcoming.

Column 4 (*b*) states the net cropped area of the year corresponding with that in column 42 of table No. 3 (area under crops), but limited to the fully assessed area for which returns are available of column 4(*a*).

Column 5 states—(1) "ordinary revenue," comprising (*a*) fixed collections, and (*b*) surplus collections; and (2) "miscellaneous land revenue" comprising (*a*) receipts from quarries and minor mineral products in forests and lands not under the management of the Forest Department, (*b*) receipts from *gorait* (village watchman) jagirs in Basti, and (*c*) miscellaneous receipts.

Column 6.—The total population of the provinces excludes the population of the family domains of the Maharaja of Benares in the Benares and Mirzapur districts.

Column 11 (*pages 307—309*) includes population of revenue-free lands when the area of such lands is less than an entire village. The inclusion does not materially affect the incidence entered in column 12.

No figures have been entered in columns 8 to 13 opposite "Lucknow, permanently settled," as no portion of the permanently-settled area has been fully assessed to land revenue.

Columns 13 and 14.—The figures are taken from the latest census report.

Ajmer-Merwara.

The table is prepared quinquennially, and the figures were last collected in 1901-02.

Column 1 (*page 308*).—Since 1893-94 the khalsa area has been classed as "zamindari and village communities (temporarily settled)" and the jagir and istamrári areas as "zamindari (permanently settled)."

Column 4 includes in the case of the khalsa villages the assessed cultivated area, including assessed fallows.

Column 5 states ordinary and miscellaneous land revenue appearing in the Civil Accounts.

Column 10 (*page 309*).—The cultivated area is, in the case of "zamindari (temporarily settled)," the cropped portion of the fully assessed area.

Column 11 excludes population of jagir villages.

Manpur.

Entry 5 (*page 285*) includes since 1893-94 the population of jagir villages which was previously omitted.

Punjab.

Columns 3 (a) and 3 (b) (*page 310*) include villages receiving frontier remissions, tracts which are entirely unassessed (such as the Kulu mountains), and istamrári tenures.

Column 5 includes assigned revenue. As regards the heads of land revenue included in this column until 1903-04, the practice was not uniform, different districts having included different items. From that year the column includes all the items falling under the head "Land Revenue" in the Civil Accounts.

Column 10 (*page 311*).—The cultivated area taken for calculating the incidence is, since 1893-94, exclusive of current fallows.

N.-W. Frontier.

Columns 3 (a) and 3 (b) (*page 312*) include villages receiving frontier remissions, and istamrári tenures.

Column 5 shows all the items falling under the head "Land Revenue" in the Civil Accounts, including assigned revenue.

Column 3 (a) includes fallows and fully assessed unoccupied area.

Column 4 excludes fallows and the fully assessed unoccupied area [see note to column 3 (*a*)]. Fallows are assessed once in five years.

Column 5 states ordinary and miscellaneous land revenue appearing in the Civil Accounts.

Column 10 (*page 313*).—The incidence is calculated from the cultivated area (excluding fallows) and the assessment on that area.

Bombay.

Column 1 (*page 314*).—Lands held under special tenures, such as talukdari, mehwasi, udhad-jamabandi, narvadari, and bhagdari in Gujarat, and khoti and izafat in the Konkan, are classed as "zamindari and village communities (temporarily settled)."

Column 3 (a) includes alienated area and the area held free of revenue or the revenue of which has been reduced by special agreement, and also the fully assessed unoccupied area since 1893-94.

Column 3 (b) includes land not available for cultivation or unassessed.

Column 4 includes land under temporary cultivation; also pôt ináms paying full assessment.

Column 5 states ordinary and miscellaneous land revenue appearing in the Civil Accounts.

Column 10 (*page 315*).—The incidence is calculated from the occupied area, which, in the Presidency proper, is treated as the cultivated area for the purposes of this table, and the assessment on that area.

Column 11 includes population of pôt ináms and the like scattered areas which cannot be distinguished from the population of the fully assessed area.

Column 12.—The incidence is based on the figures given in column 11 and those in column 8, *plus* the amount of full assessment on privileged lands held in fully assessed villages at less than that assessment.

Central Provinces.

Column 1 (*page 316*).—Zamindari (temporarily settled) includes malguzari and thekadari.

Column 2 states the area by village papers (column 6 of table No. 1) *plus* the area for which no returns exist (column 4 of the same table).

Column 3 (a).—Zamindari estates properly so-called (that is, excluding malguzari) are classed as not fully assessed.

Column 4 (b) excludes fallows since 1894-95.

Column 5.—The figures represent different items of land revenue for different districts, no uniform practice having been followed throughout the province.

Column 10 (*page 317*).—The cultivated area referred to in this column included fallows until 1894-95. Since then the net cropped fully assessed area has been taken in calculating the incidence.

Berar.

Column 3 (a) (*page 318*).—This column states jagir, izára, and palampat villages, all unassessed land, forest areas, village sites, roads, rivers, etc.

Column 4 (a).—*Pôt kharáb* lands are excluded from this column, which includes only occupied lands available for cultivation.

Column 4 (b) states the cultivated area in khalsa villages only.

Column 5.—The figures include the revenue derived from jagir, palampat, and izára villages. As regards the items of land revenue included, the practice has not been uniform, different districts having entered different items.

Column 6.—The population is that of the last general census.

Column 8 (*page 319*) includes assessment on occupied lands only, as stated in column 4 (*a*).

Column 10.—The incidence since 1896-97 has been calculated on the area entered in column 4 (*b*), that is, the cultivated area in khalsa villages only.

Column 11 excludes population of jagir and izára villages.

Madras.

The table is prepared quinquennially. The figures were last collected in 1903-04.

Column 3 (*a*) (*page 320*).—In the case of raiyatwari tracts this column states the area of unoccupied assessed lands, of all unassessed poramboke, of minor inám lands in Government villages held rent-free or subject to quit-rent, and of forest lands, excluding portions of the first mentioned two classes occupied under "miscellaneous;" and in the case of zamindari tracts the areas of hills, porambokes, and minor ináms are entered. The entire area of whole inám villages is deducted in this column.

Column 3 (*b*).—Raiyatwari; includes the area of the Agency tracts, except in Godávari, for which district particulars for such tracts are reported by the Collector.

Column 4 (*a*).—Raiyatwari; states the total occupied area as stated in village papers.

Column 5 stated until 1903-04 only "ordinary revenue" according to the classification in the Civil Accounts. In the case of raiyatwari villages, this item comprised the net land revenue demand, excluding remissions and deductions, but including quit-rent on minor ináms and miscellaneous revenue from the cultivation or occupation of lands not included in holding and also water-tax. In the case of zamindari and whole inám villages, it comprised the *peshkash* or quit-rent payable to Government, and the water-rate on lands included in such tracts, as also jodi or quit-rent on minor ináms situated therein. From 1903-04 the column includes all the items falling under the head "Land Revenue" in the Civil Accounts.

Column 8 (*page 321*).—Until 1903-04 this column stated in the case of raiyatwari the net land revenue demand, excluding remissions and deductions and revenue from minor ináms (quit-rent and water-tax); and in the case of zamindari it showed the *peshkash* or quit-rent payable to Government, excluding the jodi or quit-rent and water-rate on minor ináms. From 1903-04 this column shows only the "ordinary revenue," as defined in the Civil Accounts, on areas fully assessed.

Column 10.—The cultivated area is, in the case of raiyatwari lands, the total area cropped out of the area given in column 4(*a*). No corresponding information is available for the zamindari area.

Column 11 states the entire population of raiyatwari and zamindari villages, respectively, except of raiyatwari Agency tracts in Ganjam and Vizagapatam.

Coorg.

The table is prepared quinquennially, and the figures were last collected in 1902-03.

Entry 2 (*page 287*) includes bané and cardamom lands.

Entry 4 shows ordinary revenue, sale-proceeds of waste lands, and miscellaneous land revenue.

† The cultivated portion of the zamindari area is not known and the incidence is on the raiyatwari area only

TABLE No. 6—Transfers of Land.

This table is intended to exhibit the number of voluntary and compulsory transfers of ownership of land or tenant-right, and the area so transferred. Voluntary transfers mean transfers made by actual contract or gift, transfers by inheritance not being taken into account.

The table now in use was prescribed in 1891; it differs from the tables formerly in use in the following respects:—

1866 I E—5	1884 I E—5	1891 E
Nature of tenure	*Nature of tenure*	*Nature of tenure*
Great zamindaris, complete. Shares in such zamindaris, complete. Large zamindaris. Shares in such zamindaris. Small zamindaris. Shares in such zamindaris. Villages owned by cultivating communities. Shares in villages owned by cultivating communities. Holdings of proprietary cultivators. Intermediate holdings of a transferable character. Holdings of raiyats at fixed rates. Holdings of raiyats with right of occupancy. Revenue-free tenures.	Proprietors { Revenue-paying. Revenue-free. Tenants who have statutory (or otherwise recognised) powers of transfers.	Revenue-paying. Wholly or partially revenue-free. (No alteration.)
Number of transfers recorded (*a*) By voluntary sale or gift. (*b*) By compulsory sale. (*c*) By inheritance.	*Number of transfers* (*a*) By private contract or gift. (*b*) By order of court. (Omitted.)	(No alteration.)
Average area in acres of each holding transferred (*a*) By voluntary sale. (*b*) By compulsory sale. (*c*) By inheritance.	*Total area transferred* (*a*) By private contract or gift. (*b*) By order of court. (Omitted.)	(No alteration.)

GENERAL NOTES.

It is optional with local Governments to enter or omit transfers of lands held by tenants.

In August 1896 the following rules were prescribed:—

(1) Changes of entry due to succession, partitions, or simple mortgages, are not really transfers, and should be excluded from the table, as also should redemptions of mortgage;

(2) All temporary transfers such as leases should also be excluded, but mortgage with possession should be treated as a transfer and entered in the table;

(3) All transfers made by order of a court should also be included in the tables;

(4) The word "court" in the entry "by order of court" should be held to include a revenue court.

Instructions were issued in 1891 to the authorities of the Panjab and the Central Provinces to the effect that the entries under "by order of court" should state not merely the transfers occasioned by debt, but all forms of transfer effected through the medium of a court.

PROVINCIAL NOTES.

Upper Burma. Transfers of property in land are not as yet registered in Upper Burma; the information is collected by revenue officers. The statement includes cases in which land has been permanently transferred by gift, sale, or other transaction, for valuable consideration. The term 'court" includes a revenue office as well as a civil court.

Assam. From 1903-04 no record of transfers of property in land has been kept in the Kamrup district.

Columns 12 to 21 (*page 333*) exclude the areas transferred in the Sylhet and Goalpara districts, the information not being available.

Previous to 1896-97, in most districts all kinds of transfers, including transfers by inheritance and non-permanent transfers, such as leases, or usufructuary mortgages, were entered. Since 1896-97 transfers by order of a revenue court have been included; transfers by inheritance and non-permanent transfers have been excluded.

The table is not prepared, the information not being available. *Eastern Bengal.*

The table is not at present prepared, the information not being available. Arrangements are being made to collect statistics of transfers of land in Bengal. *Bengal.*

Transfers by inheritance or non-permanent transfers, such as leases or usufructuary mortgages for short periods, are excluded, but mortgages with possession are included, as also all transfers made under order of a court. *United Provinces.*

Transfers of *malikana* rights, that is, rights to receive a portion of the profits of an estate, not amounting to proprietary rights, which were formerly included in the table, have been excluded since 1905-06.

Statistics of transfers of tenant-right are not given. Transfers by gift have been included since 1896-97.

The figures exclude all changes due to succession, partitions, simple mortgages, redemptions of mortgages, and temporary transfers, such as leases; but mortgages with possession are included. The column "by order of court" includes transfers occasioned by debt incurred by judgment-debtors, as also all other transfers effected by order of courts, civil and revenue. *Ajmer-Merwara.*

Transfers of property in land are not permitted in Manpur. *Manpur.*

Before 1895-96, the statistics of the different kinds of tenure were presented collectively, separate figures for each kind not having been available, and the figures included all kinds of transfers relating to the tenant-rights of proprietors and occupancy tenants, but excluded transfers by inheritance. The transfers included were, (1) partitions, (2) gifts and exchanges, (3) mortgages with possession, (4) redemption of mortgages, (5) sales and permanent transfers for value, (6) other transfers, which last included cases of a miscellaneous nature, such as enhancement of rent or corrections of errors. The few cases of transfers for arrears of revenue which occurred were included under "by order of court." *Panjab.*

From 1895-96 the table includes only transfers by mortgage and sale.

Transfers by mortgage and sale only are included. *N.-W. Frontier.*

The table has been prepared since 1901-02. *Bombay and Sind.*

Transfers of tenant-right have been included since 1892-93. The figures against "proprietors" are filled up from returns compiled on the basis of mutation proceedings. Those against "tenants" are based on statements furnished by patwaris in which all transfers are entered, including transfers by mortgage with possession as well as transfers by sale, but excluding transfers by inheritance. The statement does not include leases or mortgages without possession. *Central Provinces.*

The information is obtained from the Registration Department. *Berar.*

The table includes all transfers effected by sale of fields under decree of a court (including a revenue court) either in execution of the decree or for recovery of arrears of land revenue. Private sales or recognised divisions of fields necessitating a change in the name of the registered occupant are entered under "by private contract or gift," as also are mortgages with possession. Transfers due to succession, by inheritance, simple mortgages, and leases are omitted.

Only permanent transfers, as by sale or gift, are included, when the parties concerned apply for and obtain transfers of revenue registry. These are entered under "private contract or gift." Cases in which lands are sold for arrears of revenue due to Government are also included if the lands are purchased by private parties, but excluded if the lands are purchased by Government. *Madras.*

Transfers of tenant-right are not entered, the information not being available.

The entry under the head "revenue-paying" includes raiyatwari holdings paying full assessment, and permanently settled estates paying *peshkash*; and the entry under the head "wholly or partially revenue-free" relates to minor ináms and whole inám villages.

The statement includes all legal transfers of property (*a*) by voluntary action of the owners and (*b*) by virtue of decrees of civil and orders of revenue courts. *Coorg.*

Transfers ordered by courts in cases of disputed succession, and those occasioned by debt incurred by the judgment-debtors, are included under the heading "by order of court." This heading also includes transfers ordered by civil courts from registered holders to decree-holders of lands sold by civil courts in satisfaction of decrees, and of holdings sold by the revenue authorities for arrears of revenue.

TABLE No. 7—Tea Production.

This table is intended to exhibit, in greater detail than in the preceding tables, and for a longer period, the progress made in the production of tea. The statistics, which are for the calendar year, are obtained from owners and managers of tea estates.

GENERAL NOTES.

The figures of area may differ from those in table No. 3, owing to various causes. In the first place, the two statements do not cover the same period, the figures in table No. 3 being for the agricultural or the revenue year ending on various dates from 31st March to 30th September (see page 4), while those in this table are for the calendar year. Again, statistics for this table are sometimes not furnished by the managers of certain estates, especially in Southern India, while on the other hand estimates may be supplied for areas which are not included in table No. 3.

The area is divided so as to indicate the acreage (*a*) under mature plants, that is, plants over three years old; (*b*) under immature plants, that is, plants less than three years old and unfit for plucking; and (*c*) land taken up by planters but not under cultivation. The latter is excluded from the total when reckoning the area under cultivation.

From 1903 the quantity of "green" tea manufactured has been shown separately from that of "black" tea.

PROVINCIAL NOTE.

Burma. In this province manufactured tea weighs more than uncured leaf, because the leaf is made into *letpet* (pickled tea) which is eaten by the Burmans.

No. 7

(a) Represents wet pickled tea (*letpetso*)

TABLE No. 8—Coffee Production.

This table is intended to exhibit for the production of coffee what the preceding table exhibits for tea. The statistics, as in that case, are for the calendar year, and are obtained in the way in which the figures for table No. 7 are obtained.

GENERAL NOTE.

The differences in area between the figures in this table and those in table No. 3 are due to the same causes as those stated with respect to the preceding table.

No. 8

(*d*) Less than half an acre
(*e*) The reported areas are much below the estimated areas shown in Table No. 8
(*f*) The reported production is understated being far less than the exports, which are given in Table No. 8
(*g*) Increase due to extension of cultivation of sisul fibre, which is worked in connection with cultivation of coffee

TABLE No. 9—Area and Yield of Crops.

This table is a compressed reproduction of the final estimates of certain important crops annually received from the local authorities. In all cases, the figures of both area and production are estimates, more or less approximate, though on the whole reasonably accurate. But there are exceptions in the figures for Native States which are in most cases defective by the omission of unsurveyed areas or privileged tenures or by errors, and they must be accepted with reserve.

GENERAL NOTES.

The estimates state the area actually sown, whether the crop comes to maturity or not, but fields which have been sown with other crops, owing to the failure of the first sowings, are not entered.

The areas covered by the several crops in a mixed field are estimated in various ways in the different provinces and the estimates are based on formulæ prescribed by the provincial authorities.

Generally, three estimates of each crop are made in the course of the season ; preliminary, intermediate, and final ; but for cotton four estimates are made. The figures in the table are reproduced from the final reports.

In some cases estimates are made only for tracts where the crop is extensively grown, while in Madras no information is as yet available touching the crops in zamindari estates which comprise about a third of the British districts of the presidency, though attempts are being made to secure information. It should be understood therefore that the figures in the table are by no means complete.

The yield of rice is given in terms of clean rice. That of cotton is in every case expressed in terms of 'cleaned' cotton, that is, cotton with the seeds extracted; and that of sugarcane in terms of raw sugar (*gur*).

PROVINCIAL NOTES.

Burma.

Estimates are made for rice and cotton.

The information is obtained from township officers and thugyis and is verified, on an inspection of the character of the crop, by district officers in consultation with the Superintendents of Land Records. It is compared by the Director of Land Records and Agriculture with a standard representing the average which was fixed after an extensive series of experimental crop cuttings by settlement officers.

(Rice) Estimates are made for the fifteen chief rice-producing districts of Lower Burma, namely, Akyab, Kyaukpyu, Hanthawaddy, Pegu, Tharawadi, Prome, Maubin, Pyapon, Bassein, Henzada, Myaungmya, Amherst, Tavoy, Toungoo, and Thatôn. The standard is 32 baskets (of 48lb each) = 1,536lb of unhusked rice to the acre.

(Cotton) Until 1902-03 the estimates for cotton related to the five principal cotton-growing districts, namely, Sagaing, Lower Chindwin, Meiktila, Myingyan, and Thayetmyo. Since that year all the cotton-producing districts have been reported on. Except in districts, where a settlement officer has conducted experiments in crop cutting, it is not possible to estimate accurately the average yield per acre.

Assam.

Estimates are framed for rice, cotton, mustard, jute, and sugarcane. The information is obtained from district officers.

(Rice) The estimates for rice relate to all the plains districts (*i.e.*, excluding the hill tracts). The crop includes the *bhadoi*, *aus*, or autumn rice, and the *aman*, *bao*, or winter rice. The yield of a normal crop is taken to be 7 cwt per acre for autumn rice and 10 cwt per acre for winter rice.

(Cotton) Cotton is grown in the Garo and the Khasi and Jaintiá Hills, in Cachar, Sylhet, Goalpara, Kamrup, Nowgong, and Sibsagar. It is also believed to be grown in the Naga Hills, but it is not possible to make any estimate of the crop there. The crop is sown in March and April. The normal rate of outturn is taken to be 200lb of cleaned cotton (400lb of seed cotton) per acre.

(Oilseeds) Mustard is grown in all the districts ; but the estimates in this table relate to temporarily settled tracts only. Up to 1901-02 the season's figures were based on a standard (600lb to the acre) which was first adopted in 1893. In 1902-03 a separate standard rate of outturn was fixed for each district.

(Jute) The estimates for jute relate to the three districts of Sylhet, Goalpara, and the Garo Hills in which the cultivation of jute is of any importance. The Bengal rate of 1,200lb (= 3 bales) per acre for a normal crop is taken to estimate the yield of the crop.

(Sugarcane) The estimates for sugarcane relate to all the plains districts. The average yield of raw sugar (*gur*) is taken to be 22 cwt per acre.

Eastern Bengal.

Estimates are made for rice, wheat, cotton, oilseeds, jute, and sugarcane. The figures are based mainly on rough approximate estimates made by district officers, and are more or less conjectural. The system of making crop cuttings, as in other provinces, over a series of areas and seasons for the ascertainment of standards of yield has been in force in Eastern Bengal for the last ten years, but sufficiently trustworthy figures of yield have not yet been obtained from these cuttings to enable Government to accept them as standards.

(Rice)

The rice crop includes the *bhadoi, aus* or autumn rice (sown in May and mostly reaped by the middle of September), the *aman* or winter rice (sown in May and June, transplanted in August and September, and reaped in November and December), and the *boro* or summer rice (sown towards the close of the cold weather and reaped in April to June). The yield of a normal or 100 per cent crop is taken to be 10 cwt per acre for winter rice and 7 cwt per acre for autumn and summer rice. These rates have been assumed to represent the average yield in cleaned rice.

(Wheat)

Wheat is grown in all the districts excepting Dinajpur, Bogra, Dacca, Backerganj, Tippera, Noakhali, and Chittagong. The average yield has been fixed provisionally at $10\frac{1}{2}$ maunds or 861lb per acre.

(Cotton)

For cotton four reports are prepared during the season. The crop is sown before the monsoon rains commence and harvested in winter, and is grown in Jalpaiguri, and the Chittagong Hill Tracts. Separate rates of standard outturn have been adopted for each district.

(Oilseeds)

The oilseeds are linseed, rape and mustard, and sesamum. The first three are grown in all districts (excepting Jalpaiguri, and Rangpur, in the case of linseed), and are sown generally in October and reaped early in winter. The average yield is assumed to be 6 maunds per acre.

Sesamum is grown in all districts; it is sown generally in October and reaped early in winter. A late variety is sown in the cold weather and reaped in May. The average yield is assumed to be $4\frac{1}{4}$ maunds per acre.

(Jute)

The estimate of the jute crop covers all the districts except Chittagong. A general rate of 1,200lb, or three bales, is assumed to represent the average production per acre for every jute-growing district in the province.

(Sugarcane)

The report on sugarcane relates to all the districts of the province; it is sown during the winter season and harvested after a year. The average yield of raw sugar (*gur*) is estimated at 22 cwts per acre.

Bengal.

Estimates are made for rice, wheat, cotton, oilseeds, jute, indigo, and sugarcane. The figures are based mainly on rough approximate estimates made by district officers, and are more or less conjectural. The system of making crop cuttings, as in other provinces, over a series of areas and seasons for the ascertainment of standards of yield has been in force in Bengal for the last ten years, but sufficiently trustworthy figures of yield have not yet been obtained from these cuttings to enable Government to accept them as standards.

(Rice)

The rice crop includes the *bhadoi, aus* or autumn rice (sown in May and mostly reaped by the middle of September), the *aman* or winter rice (sown in May and June, transplanted in August and September, and reaped in November and December), and the *boro* or summer rice (sown towards the close of the cold weather and reaped in April to June). The yield of a normal or 100 per cent crop is calculated as follows: the area cultivated with winter rice is multiplied by 15 maunds to the acre, and the area with autumn and summer rice by 10 maunds (the maund in each case being equal to $82\frac{2}{7}$lb). These rates have been assumed to represent the average yield in cleaned rice.

(Wheat)

Wheat is grown in all the districts of Bengal, Bihar, and Orissa, excepting Howrah Khulna, and Puri. Of the total area grown with the crop the districts of the Patna Division contain about one-half and those of the Bhágalpur division about one-third. The average yield has been fixed provisionally at 12 maunds or 984lb per acre for the Bihar districts, $10\frac{1}{2}$ maunds or 861lb per acre for the Bengal districts, and 451lb per acre for the districts of the Chota Nagpur Division.

(Cotton)

For cotton two reports were prepared up to 1904-05, one on the early and the other on the late crop; but from 1905-06 four reports are prepared during the season. The early crop, which is sown before the monsoon rains commence and harvested in winter, is grown in the districts of Midnapur, Saran, Monghyr, Bhágalpur, the Santhal Parganas, and in the Chota Nagpur and Orissa Divisions and also to a limited extent in Shahabad and Durbhanga. The late crop, which is usually sown at the close of the rainy season and harvested in May and June, is grown in the districts of Bankura, Midnapur, Manbhum, Singhbhum, and in the Patna, Bhágalpur, and Orissa Divisions, excepting the districts of Gaya, Purnea, and the Santhal Parganas. Separate rates of standard outturn for the early and the late crops have been adopted for each district.

(Oilseeds)

The oilseeds are linseed, rape and mustard, and sesamum. The first three are grown in all districts (excepting Darjeeling, Angul, and Ranchi, in the case of linseed), and are sown generally in October and reaped early in winter. The average yield is assumed to be 6 maunds per acre.

Sesamum is grown in all districts except Darjeeling; it is sown generally in October and reaped early in winter. A late variety is sown in the cold weather and reaped in May. The average yield is assumed to be $4\frac{1}{4}$ maunds per acre.

(Jute) The estimate of the jute crop covers fourteen districts in which jute is grown, namely, Burdwan, Midnapur, Hooghly, Howrah, all the districts of the Presidency division, Bhágalpur, Purnea, Darjeeling, Cuttack, and Balasore. A general rate of 1,200lb, or three bales, is assumed to represent the average production per acre for every jute-growing district in the province.

(Indigo) The report on indigo relates to fourteen districts in which the crop is grown, namely, Burdwan, Nadia, Murshidabad, Jessore, all the districts of the Patna Division except Patna, and all the districts of the Bhagalpur division except Darjeeling. The average yield is assumed to be 20lb an acre in the districts of Monghyr, Bhágalpur, Purnea, and in the districts of the Patna Division, and 12lb an acre in all the remaining districts of the province. These rates serve as multipliers of the acreage under cultivation in each district in a year of normal, that is 100 per cent outturn.

(Sugarcane) The report on sugarcane relates to all the districts of the province; it is sown during the winter season and harvested after a year. The average yield of raw sugar (*gur*) is estimated at 22 cwts per acre.

United Provinces. Estimates are made for wheat, cotton, linseed, rapeseed, sesamum, indigo, and sugarcane.

For the ascertainment of a standard rate of yield in the case of wheat, cotton, oilseeds, and indigo these provinces were divided into belts, each comprising districts resembling one another in soil, climate, and artificial conditions of cultivation. For each belt a standard rate of average full yield was fixed after consultation with zamindars, settlement officers, and managers of estates under the Court of Wards. These reported the rates of yield after weighing the actual yield of fields which were regarded as growing a crop in fully average condition. For other crops actual weighments were made at the Government farm at Cawnpore.

The condition of the crops is reported to the Director of Land Records and Agriculture by some five hundred zamindars, each for his own circle, which usually embraces a tahsil or part of a tahsil. From these figures the Director works out the average condition of the crop for each district, and calculates the yield by applying to the area of the crop in each district the standard of full yield fixed for the belt in which the district lies, modifying the yield according to the reported condition of the crop.

(Cotton) For cotton (cleaned) the standard rates of yield vary from 100 to 130lb the acre in places where the crop is raised unmixed with other crops, and from 50 to 80lb where mixed with other crops. The Native State of Rampur which is the only cotton-growing State in the province, is included in the estimates from 1905-06.

(Oilseeds) The estimates for all oilseeds show separately the mixed crop, that is, crop grown in the same field with other crops, which is gathered in small quantities over a wide area mostly for home consumption. The estimates of the mixed crop are however highly conjectural.

Linseed, unmixed with any other crop, is chiefly grown in the districts of the Rohilkhand, Allahabad, Benares, Gorakhpur, Lucknow, and Fyzabad divisions, and in Naini Tal; and rapeseed in the districts of the Rohilkhand, Gorakhpur, Lucknow, and Fyzabad divisions, and in Naini Tal and Kheri.

The only districts in which til (sesamum), unmixed with any other crop, is cultivated to any considerable extent are Bánda, Hamírpur, Jhánsi, Jalaun, Mirzapur, Gorakhpur, Sitapur, Gonda, and Bahraich. The standard of full yield of sesamum is taken at 200lb the acre.

(Indigo) In estimating the yield of indigo (dye), it is assumed that one-tenth of the total area is annually set aside for seed, and that one-fourth of a factory maund of dye represents the full average yield in an average year.

Panjab. Estimates are prepared for wheat, cotton, rapeseed, sesamum, indigo, and sugarcane.

The estimates of the standard yield are based on the results ascertained from crop experiments conducted in certain selected districts during the quinquennial period ending 1902, compared with the rates used by settlement officers for assessment purposes. The standards are separate for irrigated and unirrigated crops, and are applied to the estimates received from the district officers.

(Wheat) The estimates of the wheat crop include all the districts of the province.

(Cotton) The estimates of the cotton crop relate to all the districts except Simla, and include Native States from 1904-05.

(Oilseeds) The estimates for rapeseed relate to all but four districts, the exceptions being Simla, Jalandhar, Montgomery, and Gurdaspur.

The estimates for sesamum relate to twenty-two districts: Hissar, Gurgaon, Karnál, Ambala, Ferozpur, Kángra, Hoshiarpur, Jalandhar, Multan, Jhang, Montgomery, Lahore, Amritsar, Gurdáspur, Siálkot, Gujrát, Gujránwála, Ráwalpindi, Attock, Mianwali, Dera Ghazi Khan, and Muzaffargarh.

(Indigo) Until 1904-05 the estimates for indigo related to seven districts: Hissar, Rohtak, Gurgaon, Karnál, Multan, Dera Ghazi Khan, and Muzaffargarh; in two of these (Hissar and Rohtak) the crop was grown only for seed, and in the remaining five partly for seed and partly for dye. From that year the estimates relate to four districts only: Rohtak, Multan, Dera Ghazi Khan, and Muzaffargarh.

Sugarcane) The estimates for sugarcane relate to fifteen selected districts. The crop is sown in March and April.

N.-W. Frontier.

Estimates are prepared for wheat, cotton, rapeseed, and sugarcane. Until 1903-04 an estimate was made for the sesamum crop also, but as the area never exceeded 10,000 acres it has been discontinued.

The estimates of the standard yield are based principally on data derived from a large number of tests made during the progress of settlement operations in which crops were cut and weighed. They were framed for each assessment circle which is the unit of area, and separately for lands irrigated by canals, by wells, for alluvial (*sailab*) lands, and for lands entirely dependent on rain. The standards are applied to the estimates received from the district officers.

The estimates for wheat relate to all the districts of the province, and include the Tochi Agency from 1904-05. (Wheat)

The estimates of the cotton crop include all the districts of the province. (Cotton)

The estimates for rapeseed relate to all districts except Kohat. (Oilseeds)

The sugarcane crop is sown in March and April. The estimate relates to three selected districts, namely, Hazara, Peshawar, and Bannu. (Sugarcane)

Bombay and Sind.

Estimates are framed for wheat, cotton, linseed, rapeseed, sesamum, and groundnut. The estimates include British districts as well as Native States.

No standard of yield has yet been adopted. Local estimates are converted to quantitative figures by a formula based partly on actual ascertainment of yield by crop cuttings and partly on returns of estimated yield and local enquiry. The ascertainment of actual yield is being systematically continued in each district under the direction of the provincial Agricultural Department, and the results are tabulated and compared in order to form a basis for a revision of the formula. The unit of area in the formula is the taluk and dry and irrigated crops are separately dealt with.

Each year's estimate is prepared by the mamlatdars (or mahalkaris where the taluk is sub-divided) from notes which they make and from reports from village accountants and circle inspectors. The estimate is sent direct to the Director of Land Records and Agriculture, who, in the light of the general prospects of the season, makes the quantitative calculations. A copy of the estimate is at the same time sent to the Collector through the Sub-divisional officer, who sends his remarks, if any, to the Collector, forwarding a copy of the same to the Director. The Collector on receipt of these remarks forwards to the Director his opinion as regards the general condition of the whole district.

Except for Gujarát, the formula is framed on a system by which allowance is made in the quantitative yield for the ascertained tendency of the raiyat to under-estimate good yields and to over-estimate poor yields.

For Sind there are no formulæ, and all the necessary information is obtained by the district collectors in the form of estimates on the basis of twelve, together with quantitative equivalents gathered from general experience.

For the Native States estimates are obtained, and the formula for adjoining British districts is applied.

The estimates for wheat include the British districts and Native States in Gujarát, Deccan, Karnátak, and Sind. (Wheat)

The figures for cotton relate to the whole area under that crop in the Bombay Presidency (including Sind) and include both the early crop of the Deccan sown in July to August and harvested in December, and the late crop of Gujarát, Karnátak, and Sind sown in September to October and reaped in February to March. (Cotton)

The estimates for linseed include the British districts and the Native States in Gujarát, Deccan, and Karnátak. (Oilseeds)

Those for rapeseed include the British districts and the Native States in Gujarát and Sind.

The estimates for sesamum include the British districts and the Native States in Gujarát, Deccan, Karnátak, Konkan (excluding Kanara), and Sind.

The estimates for groundnut include the British districts and Native States in the Deccan, and the Belgaum district in Karnátak. (Groundnut)

Central Provinces.

Estimates are framed for wheat, cotton, linseed, and sesamum.

Standards were framed for each crop from the results of crop-cutting experiments on selected fields under the supervision of responsible and selected officials during the years 1884-85 to 1887-88. For wheat the standard was framed separately for first and second class lands, and the proportion in which the area of each class was cropped was taken into account; irrigation also was taken into account, but in a less degree as it is of importance only in the case of the rice crop for which no estimates are made. The standards were revised in 1894 on a review of crop-cuttings made during the four years, 1888-89 to 1891-92. They were again revised in 1898 on a revision of crop-cuttings made during the four years 1892-93 to 1895-96. The standards for cotton were again revised in 1903. The yield expressed by the people in terms of annas in the rupee is converted into percentages, 13·3 annas, or a normal crop, being taken to be equal to 100. A full crop or 16 annas is denoted by 120, and a bumper crop or 20 annas by 150. All deductions based on the standards are made by the Director of Land Records and Settlements from the year's figures furnished by district officers who are supposed to bear in mind the standards when estimating the yield of the season.

Until 1897-98 the figures of area did not take into account the zamindari areas in Raipur, Biláspur, and Sambalpur, for which no statistics were available, the survey being in progress. Since that year, the surveyed portions of these zamindari areas have been included.

(Wheat) The area sown with wheat as a mixed crop with gram is reduced for the purpose of excluding gram by 15 per cent in the districts of the Nagpur and Chattisgarh divisions, and by from 25 to 40 per cent in the rest of the province.

(Cotton) The area on which cotton is grown mixed with other crops is reduced by deductions varying in the different districts from 7 to 16 per cent.

(Oilseeds) In the case of linseed sown with gram the area is reduced by 20 per cent for the purpose of excluding gram.

Berar. Estimates are framed for wheat, cotton, linseed, and sesamum.

No standard yield was fixed until 1903-04 and there was no specific system for estimating the yield of the harvests for the purposes of the forecasts. The estimates from 1903-04 have been calculated on the lines followed in the Central Provinces, taking the standard of normal outturn per acre to be 550lb for wheat, 100lb for cotton (cleaned), and 350lb each for linseed and sesamum.

Madras. Estimates are framed for rice, cotton, sesamum, groundnut, indigo, sugarcane, and castorseed.

The figures relate only to raiyatwari villages forming a little more than two-thirds of the British districts of the Presidency. In the case of cotton, however, efforts are being made to obtain figures for villages other than raiyatwari. The estimates of the rate of yield are those reported by tahsildars, which are tabulated in the office of the Board of Revenue.

(Rice) For rice the standard rates are based on the grain values of soils taken for settlement purposes, and worked out for each settled district as the standard for these districts. For districts not yet settled, and for Tinnevelly, the average of all settled districts is taken.

(Cotton) For cotton the standard has been determined on a full consideration of all available data at 40lb per acre for Northerns and Westerns, 55lb for Salems, 90lb for Tinnevellies, and 50lb for Cocanadas and others. The sowings of cotton continue from July to October in the central and Deccan districts, and in the southern districts until the end of December. The harvesting of the crop begins in February and continues until July or August.

(Sesamum) For sesamum the standard of yield has been fixed with reference to the latest crop-cutting experiments at 336lb per acre for the Vizagapatam, Godavari, Tanjore, and Trichinopoly districts, 224lb for Malabar and the Deccan districts, and 280lb for the remaining districts.

(Groundnut) The groundnut crop is chiefly grown in North Arcot, Chingleput, South Arcot, Tanjore, and Trichinopoly, more than half being grown in South Arcot. The crop is also very largely grown in the zamindari area from which no statistical information is at present obtainable. The rate of outturn has been fixed at 10 cwt of nuts in shell per acre.

(Indigo) The estimates for indigo comprise the districts in which it is mainly grown: Kistna, Nellore, Karnul, Anantapur, Cuddapah, Chingleput, and North and South Arcot. The standard of yield was taken, on the best information on record, at 25lb of dye to the acre.

(Sugarcane) The sugarcane crop is grown chiefly in South Arcot, Trichinopoly, Ganjam, Godavari, Bellary, Anantapur, Coimbatore, and Cuddapah. The standard of yield has been fixed at 45 cwt of manufactured jaggery (*gur*) to the acre.

Ajmer-Merwara. Estimates are made for cotton only. As regards area, the information is taken from the field book (*khasra girdawari*) prepared by the patwaris in November each year and checked by the higher revenue officers. The estimates of yield are based on the average of the results obtained by crop-cutting experiments conducted each year. The figures include khalsa as well as jagir and istimrár areas.

Rajputana and Central India. Estimates are framed for wheat and cotton. They are generally defective in consequence of the absence of figures for unsurveyed areas and privileged tenures in most cases.

Hyderabad. Estimates are framed for wheat, cotton, and oilseeds. Until 1902-03 the figures excluded *jagir* and such other revenue-free lands or privileged tenures; since then statistics for these areas have been obtained as far as possible and included in the statement.

Mysore. Estimates are framed for wheat and cotton.

(*a*) The production in bales for the years up to 1903-04 and for 1905-06 represents the quantities exported from India and consumed in the mills. For 1904-05 and 1906-07 the reported estimate of production, which is greater than the total of exports and mill consumption, has been stated. See note (*g*) on page 380

(*b*) See footnotes on page 385 regarding the acreage and yield of jute

1904-05	49,000	10,000
1905-06	59,000	13,000
1906-07	61,000	13,000

(*a*) Includes the State of Baroda also

(*b*) The estimate for the year is too low, as the mill consumption for the year ending the 30th June and the net exports for the year ending the 30th September were 605,000 bales. For both the preceding and the following years the trade figures are however lower than the estimates, so that for the 3 years 1898—1901 the production would seem to be understated only by 109,000 bales. In this calculation the excess of the exports from the districts of the North and East Deccan over their reported production, which averages 208,000 bales in the twelve years 1891—1903, has been taken to represent imports by road into the Presidency from the neighbouring Native States

(*c*) The figures of production for Berar for the years previous to 1903-04 represent the mill consumption for the year ending the 30th June and the exports for the year ending the 30th September, as the provincial estimates of the outturn were extremely defective

(*d*) The estimates for Madras have hitherto excluded the *zamindari* tracts where a large amount of cotton is cultivated. No reliable statistics are available for these areas, but it was roughly estimated in 1901-02 that that season's yield which was taken at two-thirds of the normal, would be about 52,250 bales

(*e*) The figures for the years previous to 1902-03 exclude *jagir* areas

(*f*) Including certain Native States from 1904-05

(*g*) Constituted in 1901 out of the Panjab

Note.—The figures for 1906-07 are subject to revision

1906-07	22,344,000	4,908,000	4,189,000

(*a*) Exclusive of zamindári area in Raipur, Biláspur, and Sambalpur
(*b*) Represent exports and consumption of the years ending the 30th September as the reported estimates of the yield were imperfect
(*c*) Exclusive of Tonk
(*d*) Exclusive of the greater part of the Bhopal Agency
(*e*) Includes Eastern Bengal up to 1903-04
(*f*) Assam only
(*g*) For the years up to 1905-06 the exports are for the year ending the 30th September and the mill consumption for the year ending the 30th June. For 1906-07 both the exports and the mill consumption are for the year ending 30th June. No reliable information exists as to the annual consumption outside the mills but a million cwt or 280,000 bales is probably below the mark. The deficiency in the total of the estimates compared with the quantities exported and consumed which is especially noticeable in the year 1899-1900 cannot be satisfactorily allocated, but it is probable that the remaining errors are chiefly in the estimates of Native States

Note.—The figures for 1906-07 are subject to revision

(a) Includes Eastern Bengal up to 1903-04

(b) "Pure" means seed sown by itself; "mixed" means seed sown in the same fields with other crops. The estimates of the mixed crop of the United Provinces are highly conjectural; hence they have been kept separate

(c) The figures for the years previous to 1902-03 exclude *jagir* areas

(d) The estimates of yield for the years previous to 1903-04 are defective, being base on incorrect data

(e) Includes the State of Baroda also

Note.—The figures for 1906-07 are subject to revision

(a) The average outturn per acre in Madras has been fixed at 1,220lb of nuts in shell. In Bombay where groundnut is mainly grown with the help of irrigation a good average crop is 3,200lb.

(b) No information (c) Excluding Native States (d) Madras only (e) In Bombay only

(f) Includes Eastern Bengal up to 1904-05 (g) Incomplete

Note.—The figures for 1906-07 are subject to revision

TABLE No. 10—Average Yield of Crops.

The table states the average yield in lb per acre of the principal cultivated crops, revised with reference to the results ascertained from the cutting and weighment of crops grown by cultivators in the two periods of five years ending respectively with the years 1896-97 and 1901-02, and compared with the average yield estimated from previous data in 1892.

GENERAL NOTES.

A provisional return of the yield of the principal crops cultivated in India was compiled in 1892 from various statistical publications, such as agricultural and settlement reports, crop forecasts, gazetteers, replies to the enquiries of the Famine Commission, etc. To provide for the periodical revision of the estimates a system of experimental crop-cuttings was prescribed by the Government of India, the results of which were to be reported in quinquennial returns. The estimates corrected by the results of the experiments made during each quinquennium have been separately tabulated in the statements which give the average yield of the selected crops in the districts of each province and the provincial averages where these have been ascertained. The provisional estimates of 1892 are also reproduced in the tables of district averages and are there contrasted with the results recorded for each of the subsequent periods, either as revised estimates, or as averages which are not qualified to supersede the previous standards.

The instructions of the Government of India for the preparation of the quinquennial returns are that the estimate given should be that of the average outturn on average soil in a year of average character as deduced from a consideration of the information obtained or experiments made during the years under review; so that when multiplied by the average area cropped, it may give as near an approximation as possible to the outturn of the crop in an average year. It is assumed that the Agricultural Department of each province has at its disposal a provisional estimate of the average yield of land of average quality (under the two major heads of irrigated and unirrigated land) for the several crops in each district. The object of the experiments annually made is to furnish tests of the accuracy of these estimates and to enable the head of the Agricultural Department in each province to revise these estimates and his provincial estimates when necessary. At the end of the five years each Agricultural Department should submit the district and provincial estimates which the experience and the information of the period lead it to substitute for the estimates previously put forward. Should it happen that the period has been one of exceptionally poor harvests and the crop experiments received by the Agricultural Department from the districts show exceptionally poor outturns, this would not necessitate the reduction of the standard estimates of yield for the district or for the province, unless it was considered that the standard estimates in their character of estimates of yield in average years were too high. The quinquennial returns are not intended to indicate the outturn per acre during the particular period, which may have been a period of exceptionally good or exceptionally bad harvest, but what may be reasonably considered the normal outturn in a year of average crop.

The labour expended on crop-cuttings during the last quinquennium ending 1901-02 resulted in the collection of much valuable information regarding the yield of the crops; and the estimates, though still imperfect, are, by reason of the experience gained, more reliable than those given in the returns for 1896-97. No revision of the previous estimates was, however, made in Bombay and the Central Provinces, owing to the very unfavourable character of the seasons. In Madras and Bengal progress was made in the conduct of the experiments, and the results were tabulated as indicating the yields obtained during the quinquennium; but it was held, as at the close of the former quinquennium, that is, after ten years' experience, that the information is insufficient to justify the revision of the earlier provisional estimates which are admitted to be imperfect. In all provinces the chief difficulty, which can only be overcome by experience, would seem to be the selection of typical fields for the experiments. The instructions of the Government of India that the quinquennial returns are not for the purpose of indicating the yield of the crops during the particular period, should not be understood as interfering with the ledgering of the results, just as reported by the experimenting officers, and the calculation of averages which will be typical of the outturns of each year and of each series of years. For, if this record is continued, the results will in time give the yield which must approximate to that of an average year, especially if the averages for very exceptional seasons are excluded, and by this means an element of conjecture, which must be a continual source of error, namely, the opinion of the experimenting officer of the relation which each crop measured bears to a normal crop, will be eliminated. The view of a normal crop has also a tendency to become an ideal which is rarely if ever produced.

PROVINCIAL NOTES.

Burma. The yield per acre is not necessarily the average yield during the five years ending 1901-02, but is an attempt to represent the average yield per acre on average soil in a season of average

character for each principal crop, and the figures were obtained by comparing and revising the results of the preceding quinquennial period with the averages obtained in this. In order to show the main product only the following deductions were made from the gross outturn of the crops, namely, for rice 33 per cent, for jawar 30 per cent, and for cotton 70 per cent. The experiments made from 1897 to 1902 were very much more numerous and reliable than those in the preceding quinquennial period, and only those that were said to be representative of the year were considered in drawing up the quinquennial average. The experiments were, as before, usually conducted by the township officers and occasionally by Deputy Commissioners and sub-divisional officers. In many districts the Superintendent of Land Records chooses the fields for measurement under the direction of the Deputy Commissioner. The results were not in all cases in Upper Burma as good as they might be and many reported figures were rejected, but there are others of doubtful appearance which were included. The average outturn of husked rice in Lower Burma increased from 1,140lb to 1,200lb, and the chief reason of this is the very large area of virgin soil that was exploited during the ten years ending 1901-02.

Assam.

A large number of experiments were made and numerical averages obtained from them for the three periods (1) prior to 1892, (2) 1892-93 to 1897-98, and (3) 1897-98 to 1901-02. These experiments were carried out by officers varying in rank from a Deputy Commissioner to a head constable, and in calculating the average they were all treated as of equal value and no allowance was made for exceptional seasons. Returns were also included, which, though not impossible, are evidently largely in excess or defect of the normal outturn and throw little or no light on the standard yield. Separately from this an attempt was made to fix a normal outturn after taking into consideration the character of the season in which the experiments were made and the extent to which reliance can be placed upon the officers conducting them, and after excluding abnormal yields, whether they err either on the side of excess or defect. The crops for which a standard has been fixed are *sali*, or *sail*, the winter rice which is always transplanted and which forms the staple crop of the Assam valley; *bao* called in Sylhet *aman* and in Cachar *asra*, a long-stem rice which is usually sown broadcast but is occasionally transplanted and is reaped in November or December; and *ahu* or *aus* which like *bao* is sometimes transplanted but is reaped in the summer. In Sylhet there is also a prolific variety of transplanted rice known as *sailbura* which is sown in low basins as the floods recede and is cut in April and May. Outturns have also been fixed for mustard and sugarcane, and for linseed which is grown only in Sylhet. The provincial average for rice depends on estimated areas for the most important districts, and the normal shown must be taken with great reservations. The irrigated area under rice in the province is comparatively small, and no attempt was therefore made to prepare separate estimates of yield for such areas.

Bengal (including Eastern Bengal).

At the close of the year 1896-97 it was reported that the experiments of the preceding three years were not sufficiently reliable and definite to justify a revision of the estimates of 1892, which, when they were framed, were described as rough approximations having no pretensions to accuracy. During the quinquennium ending 1901-02 some progress was made in the number of experiments and in the care with which the work was done, but there is still great room for improvement. Many of the results recorded show that the experiments were not carefully conducted or that representative crops were not selected for cutting. The experiments were also far too few and the results too discrepant to justify any general conclusions as to the average yields of the various crops, or to afford grounds for modifying the provisional estimates previously adopted by the Agricultural Department, which are in part a reproduction of the estimates of 1892. In tabulating the returns these unrevised provisional estimates have been entered in the statement of provincial averages, but in the detailed table of district averages the average outturn of the experiments conducted during the quinquennial period ending 1901-02 are shown for each district. It is not possible from these figures to deduce a true average for the province, as it is not known how much of the area under each crop is unirrigated and how much is irrigated; a general average has, however, been entered at the foot of the table of district averages which represents the sum of the district averages divided by the number of districts; and on comparing these with the provisional estimates the head of the local Agricultural Department inclines to the opinion that as regards rice the average yield per acre of the winter crops is probably nearer 1,110lb (13½ maunds) than the present standard of 1,234lb (15 maunds) and that the standard of 823lb (10 maunds) for autumn rice may be on the low side. There are also grounds for regarding the Department's estimate of the yield of wheat in Bihar as excessive, while that of maize seems to be too low. These impressions are not, however, held to justify a revision of the previous estimates.

United Provinces.

The figures of the approximate yields are not actual averages of produce of the five years ending 1901-02, but are estimates, based on the experience of that period as well as of former years of the outturn that may be expected in a year of average character. During the first year of the quinquennium ending 1901-02 a large number of cuttings were made in every district, but as the supervision was inadequate a large mass of untrustworthy data was accumulated. In 1898, therefore, new rules were issued to provide for careful selection of fields and accurate work on a smaller scale, and this system has, on the whole, worked well. The method of dealing

with the reports of the experiments is as follows:—All results that are obviously untrustworthy are rejected; the remainder are then examined in detail to ascertain that the crops were taken in the normal course of agriculture, and had not been subjected to special treatment, that the fields were typical of the classes of soil on which the crops are ordinarily grown, and that the local conditions were fairly normal. Results which pass these tests successfully, and which are not materially divergent among themselves, are compiled and averaged for the year without remark. Those which cannot be taken as certainly typical, whether through adverse climatic conditions or any other cause, are averaged separately and compiled with notes showing the nature of the defect. Finally all the figures for the quinquennium are again examined and compared with the standards determined in previous years, and the question is considered for each experimenting district and for each crop whether the evidence is sufficient to justify a change in the former standard. Determinations are not now made for each district in the provinces. The districts are grouped into agricultural regions, and the determinations made in the representative district or districts, are applied to the whole region. The standards of 1892 give a false idea of precision through being originally calculated in maunds and then reduced to pounds. The estimates have, therefore, been modified so that they show even figures. The figures for the period 1894-97 are not standards but averages of the actual determinations of four years during which the seasons were generally unfavourable.

Panjab. Crop experiments for wheat and jawar were made in ten districts, for cotton in nine, for maize in eight, for barley, gram, and rape in seven, for rice in six, for bajra in five, and for sugarcane in four. The districts were selected so that the experiments should be fairly representative having regard to differences of soils and climatic conditions and to the extent of the cultivation of different crops in different districts. The reports of the experiments have been carefully reviewed, district by district, for each crop separately. In most cases they showed results which *primâ facie* seemed excessive, as much as 2,240lb of wheat per acre having been reported from one district. The results obtained in the abnormal periods of drought and excessive rainfall were neglected and the rest compared with the yield estimates adopted for assessment purposes. Tested in this way the yield estimates reported by district officers were in many cases modified. As regards districts other than those in which crop experiments were made, the yield estimates reported from similarly circumstanced neighbouring districts and the estimates used by assessing officers in course of settlement were made use of. The present estimates are, by reason of the further experience gained in the five years, more reliable than those given in the return for 1892—97. There is, however, such a diversity of soils in each district and from district to district, that crop-cuttings in a few places here and there can only be used with caution as an estimate of the average yield rates for the district as a whole, and much less for the province.

N.-W. Frontier. The estimates of the Peshawar and Dera Ismail Khan districts are based on five years experiments made partly by Revenue assistants and Tahsildars and partly by Settlement Officers. Some of the experiments, however, which brought out too high or too low results as compared with the averages of the previous quinquennium or the averages derived from the Settlement or Assessment Reports, or which from the remarks of the experimenting officers appeared not to have been made under average conditions, were rejected. For the districts of Hazara, Bannu, and Kohat, the averages shown in the quinquennial return for the period ending with 1896-97, which were themselves a reproduction of the estimates of 1892, were repeated.

Sind. No regular crop experiments had been made when the statistics of average crop yields were compiled in 1892. The information supplied in 1897 was likewise very meagre as the experiments were few, but the hope was expressed that at the end of the next five years the field of experiments would be sufficient to form the basis of a more trustworthy estimate. The figures for the quinquennium ending 1901-02 are for some of the crops the result of selected experiments, of which not more than one was taken for any crop in each district, and of those made during the five years only nineteen for the whole province. For the remaining crops, the figures are either repeated from the return made in 1897 or taken from older reports. Of the experiments selected as giving results typical of an average crop, five were on wheat; four on jawar; two each on bajra, gram, til, and sugarcane; and one each on barley and rapeseed. A noticeable feature is the very high yields of jawar (which is shown to average over one ton of grain to the acre in the Karachi district), and of cotton of which the outturn was originally given as 466lb to the acre as the average for the province but was afterwards reduced to 308lb. The fact of the crops being irrigated is held to justify these estimates, but it is noteworthy that there are no recorded experiments on cotton during the ten years ending 1901-02. The rates of yield per acre for the whole province are faulty as they represent the sum of the rates for each district divided by the number of districts instead of the sum of the estimated total outturns of the districts divided by the total cropped area of the province.

Ajmer-Merwara. Crop-cutting experiments to the number of 135, each on one-tenth of an acre, were distributed over the five years, 67 being made in Ajmer and 68 in Merwara. The yield given

for each crop in each district is the exact quotient resulting from the division by the number of acres experimented on of the total quantity of produce taken from the land in all the experiments. The provincial yield is similarly derived from the grand total of all the experiments without reference to the relative size of the two districts. It is claimed for the experiment that they exhibit the very great productiveness of the soil when water in sufficient quantity is procurable at the right times; but this is not the object for which they were prescribed, and some of the results, especially as to the yield of maize, are so divergent that they cannot be accepted even as representative of the outturn of average land during the particular period.

Berar.

Crop experiments were carried out during four years of the period 1897-98 to 1901-02, as no experiments were made in 1899-1900 owing to the famine. Altogether 200 experiments were accepted. From the anna valuations of the respective crops estimated by the experimenting officers (that is the relation each crop measured bears to a normal crop) the average yield per acre of a 16-anna crop, which would represent the outturn in an average year, was worked out for each of the four years separately, and on this basis were determined the standards which are stated to represent approximately the average yield per acre of the principal crops. The dependence on the anna estimates must, however, introduce a large element of conjecture, and mistakes are likely to occur, first in the conception of the number of annas representing an average crop and secondly in estimating the relation which each crop measured bears to the standard of an average year. The estimates appear to be optimistic.

Coorg.

An estimate based on experiments made during the five years ending 1901-02 was made for rice which is the principal crop. The yield given is 1,446lb to the acre, the estimate framed in 1897 being 1,364lb. From experiments made in 1905-06 with rice, ragi and coffee the yield per acre is estimated to be 773lb for rice, 480lb for ragi, and 190lb for coffee.

Bombay.

The five years that followed the compilation, in 1897, of the quinquennial return of the average outturn of the principal crops of the Presidency proper, were of the most unfavourable character, and owing to the pressure of duties connected with famine and plague district officers were prevented from carrying out any considerable number of experiments on crops of average value. The previous estimates, which were prepared with great care and with expert assistance and are considered to be approximately correct, have therefore been retained without change. These estimates for irrigated crops are generally much higher than the estimates of other provinces and remarkably so in the case of sugarcane.

Central Provinces.

Experimental crop-cuttings were started in 1884-85 and a reliable estimate was framed in 1894 from the experiments up to 1891-92. The accepted estimates of the crop outturns were again examined in the light of the experiments made during the four years ending 1895-96 and the standards were changed only when there was a strong statistical basis to proceed upon. The succeeding years up to 1901-02 include two famine years marked by almost complete failure of crops with other years of partial failure, and the figures relating to this period cannot, therefore, afford much information as to the average yield of the province. Numerous experiments were made in these years, but they were largely confined to areas where the crops were peculiarly bad and where distress was apprehended, their object being rather to find out the extent of the crop failures than to facilitate the estimation of an average yield. In these circumstances the revised estimates made in 1898 were taken as holding good for the quinquennial period ending 1901-02.

Madras.

The standards of the outturns of the various principal crops which were adopted for the province in 1892, were arrived at on the best data available and were accepted as giving a fair approximation to the average yield per acre. The experiments ledgered during the succeeding five years were so few and results obtained from them were so divergent that it was considered expedient to reject them and adhere to the previous standards recorded by the Settlement Department, although these were then believed to be in many cases below the mark. The experiments ledgered during the five years ending 1901-02 number 2,619, and the results recorded for each district are the averages of those experiments. The general average of the provincial yield of each crop is not the sum of the estimated total outturns of each district divided by the total cropped area of the province, but represents the total outturn of all the experiments divided by the number of experiments. That these figures, which are admittedly only averages of the results obtained during five years, are commonly in excess of the standards previously adopted, is considered natural as the latter are based upon settlement estimates for all sorts and kinds of soil and are believed to be below the mark. The Board of Revenue, however, remarked that until a vastly larger number of results have been obtained over a much larger variety of conditions and from experiments made by a specially qualified staff, it would be altogether unsafe to adopt averages such as those now reported as representing the normal outturn in a year of average crop, which "when multiplied by the average area cropped, may give as near an approximation as possible to the outturn in an average year." The average assessment on the land on which the crops experimented with were grown is higher than the average assessment for the Presidency, and hence it is inferred by the provincial authorities that the land chosen for experiment was largely above the general average. The recorded

results of the experiments do not, however, indicate that the yield varies directly as the assessment, and some of the highest yields are returned for land with the lowest assessment. The yield was reported of paddy instead of husked rice, and to obtain the yield of cleaned rice a deduction has been made of 38 per cent. For the sake of comparison, a similar deduction has been made from the yields of paddy reported in 1892.

Mysore.

The standards framed in 1897 were based on experiments made during 1896-97, which was a year of scanty rainfall. During the next five years experiments were conducted annually and the results returned are the averages of those experiments. Whether these results represent the outturn of an average year depends, therefore, on whether the seasons were generally of an average character during the period of the experiments.

No. 10

AVERAGE YIELD (lb per acre) of PRINCIPAL CROPS in each PROVINCE of BRITISH INDIA and in MYSORE revised with reference to crop experiments made in the two periods of five years ending respectively with the years 1896-97 and 1901-02, and compared with the AVERAGE OUTTURNS ESTIMATED from PREVIOUS DATA in 1892

(*Provincial estimates were not framed in 1892. The data from which these estimates are computed are often imperfect, as there should be first an accurate knowledge of the yield of each district, and secondly, of the area under each crop in each district*)

AGRICULTURAL STATISTICS

OF

INDIA

FOR THE YEARS

1901-1902 TO 1905-06

VOLUME II—NATIVE STATES

Prefatory Note

The total area of Native States in India is 489,913,090 acres with a population of 64 millions. These are divided for purposes of Agricultural Statistics into two main classes :—

(1) *Tributary or Feudatory States under Local Governments.*—The total area of these States is 174,328,401 acres with a population of 23½ millions exclusive of the population of certain areas which were not distinguished from British territory in the Census of 1901. There are no agricultural statistics available for this area.

(2) *States having direct political relations with the Government of India.*—These are divided into the following main groups :—

	Area (acres)	Population
Baluchistan (Native)	54,821,760	467,559
Hyderabad	52,926,720	11,141,142
Baroda	5,183,360	1,952,692
Kashmir	51,776,000	2,905,578
Mysore	18,836,529	5,449,800*
Rajputana States	81,626,240	9,723,301
Central India ,,	50,414,080	8,628,781

No agricultural statistics are available for Baluchistan (Native), Hyderabad, Baroda, or Kashmir, and of the remainder returns are only received from the following States :—

	Acres	Population
Mysore	18,836,529	5,449,800*
Rajputana States—		
Jaipur	9,970,560	2,658,666
Bikaner	14,919,040	584,627
Marwar	22,410,240	1,935,565
Tonk	1,649,892	273,201
Alwar	2,034,681	828,487
Kishangarh	549,120	90,970
Bharatpur	1,263,408	626,665
Jhalawar	527,204	90,175
Kotah	3,637,760	544,879
Central India—		
Gwalior	14,845,264	2,933,001
TOTAL	90,643,698	16,016,036

Of this gross total 90,643,698 acres covered by returns received from the 11 States mentioned above statistics are not available for 43,536,886 acres of

* Excludes the population (89,599) of the civil and military station of Bangalore

land which is held on jagir, muafi, and other privileged tenures, or which is unsurveyed. The net area actually covered by these statistics is, therefore, only 47,106,812 acres by professional survey, or 47,152,786 acres according to village papers; but of this 3,721,819 acres are under forest and 13,835,422 acres are either absolutely barren, or otherwise unfit for cultivation, or have been definitely assigned to purposes other than agriculture. The remaining 29,595,545 acres represent the area of culturable land dealt with in these tables. Of this 10,824,169 acres are land which is available and fit for cultivation but not actually cultivated, and 6,756,367 acres are current fallows. The area actually cultivated, therefore, for which figures are given in these tables is 12,015,009 acres.

The dates from which the Agricultural Statistics have been prepared in the 11 Native States mentioned above are as follows:—

Mysore	1886-87
Jaipur	1892-93
Gwalior	1896-97
Bikaner, Marwar, Tonk	1898-99
Alwar, Bharatpur, Kishangarh, Jhalawar, Kotah	1900-01

The year to which the statistics relate is different in the different States —

Year ending 31st March	in Bikaner
„ „ 31st August	„ Alwar
„ „ 30th June	„ Mysore, Gwalior and Jaipur
„ „ in July	„ Kishangarh
„ „ 14th July	„ Marwar
„ „ 14th September	„ Bharatpur
„ „ 30th September	„ Kotah and Jhalawar
„ „ 31st October	„ Tonk

A glossary is attached to this note giving the meaning of vernacular words used in the Explanatory Notes which are prefixed to the Tables in this volume.

Vernacular terms used in the Explanatory Notes

Bhaiyachara (Alwar).—Villages held in common property by a number of families, by possession without reference to shares.

Chauth (Bharatpur).—Land paying one-fourth of the rental.

Inám (Mysore).—Wholly or partially revenue-free tenure; *minor ináms* are plots of inám lands situated in a village, whether Government or inám.

Istamrár (Gwalior).—A tenure which, though the revenue is assigned, is charged with a permanently fixed quit-rent.

Istamrár (Alwar).—A tenure which, though favourably assessed, is charged with a permanently fixed quit-rent.

——— (Bharatpur).—Land paying a reduced permanently fixed *jama* (assessment).

Jagir (Mysore, Gwalior, Bikaner, Kishangarh, Kotah).—Land granted revenue-free on condition of military service or as a charitable endowment.

Jagir (Alwar).—Assignment of land revenue, with or without condition of military service and payment of commutation dues, granted in recognition of meritorious services to relations of the ruling chief or other high officials of the State.

Jodi (Mysore).—A whole inám village paying quit-rent to Government.

Kayamgutta (Mysore).—A whole village granted by the State on fixed money-rent.

Khalsa (Gwalior, Jaipur, Bikaner, Marwar, Bharatpur).—Land paying full revenue to the State.

Muafi (Gwalior, Alwar, Kotah, Bharatpur).—Land granted free of revenue.

Patel (Mysore).—Village headman appointed by Government.

Pattidari (Alwar).—Villages held by a number of families, by shares, ancestral or customary.

Rundhs (Bharatpur).—State grass preserves.

Sarvamanayam (Mysore).—An inám village, wholly revenue-free.

Shanbóg (Mysore).—A village accountant appointed by Government.

Tanka (Gwalior).—Estates held by certain families who were in power when the country was annexed and who were left in possession of their estates on payment of a fixed annual tribute, or *tanka*, bearing but a small proportion to the annual assets.

Ubari (Gwalior).—Land held at an abatement of the full land revenue.

Zamindari-bil-ijmal (Alwar).—Villages held jointly by a body of owners.

ROYAL ASIATIC SOCIETY LIBRARY OF THE BOMBAY BRANCH

SUMMARY OF THE AGRICULTURAL

Area in acres :	1896-97	1897-98	1898-99	1899-1900	1900-01
1. By professional survey	28,334,209	28,353,412	40,052,539	40,066,041	46,522,976

Marwar, and Tonk from 1898-99; and for Alwar, Kishangarh, Bharatpur, Jhalawar, and Kotah from 1900-01

TABLE No. 1—AREA

In this table should be entered the total area of each State, the areas for which statistics are and are not available being separately entered.

GENERAL NOTES

Column 2 (*page 9*).—The professional survey is that carried out by the Survey of India in Northern India, and by the corresponding Departments in Southern India. In States where there has been no professional survey, the figures are based on the best information available.

Column 3.—In this column is deducted the entire area for which the statistics required for Tables Nos. 2 and 3 are not forthcoming in whole or in part. This area comprises chiefly estates held on privileged tenures which have not yet been surveyed and which possess at present no agency for the annual collection of Agricultural statistics. As surveys extend and the organisation of village statistical establishments develops, the area in this column is reduced, and that entered in the next columns (4 and 5) and dealt with in tables Nos. 2 and 3 is correspondingly increased.

Columns 4 and 5.—Column 4 is a check on the accuracy of column 5. In the latter "village papers" means "the papers prepared by the village accountants." In States where no village papers exist, the figures in column 4 are repeated in column 5. The area in village papers may differ somewhat from that given by the Survey Department, (*a*) because, while the survey area is calculated in block, the area by village papers represents the added total of field and village areas; and (*b*) because the system followed as regards the inclusion or exclusion of areas covered by water, buildings, roads, and railroads is not always uniform in the two sets of returns.

PROVINCIAL NOTES

Mysore.

Column 2 (*page 10*) states the whole area of the State as ascertained by revenue survey.

Column 3 exhibits the area of jodi, kayamgutta, and sarvamanyam villages and jagirs, for which the statistics required for the other tables are not available at present.

Column 5.—The figures in column 4 are repeated.

Jaipur.

Column 2 (*page 10*) states only the khalsa area, forming about one-third of the whole area of the State.

Gwalior.

Column 2 (*page 10*) states the whole area of the State.

Column 3 states the estimated areas of jagir, muafi, ubari, tanka, istamrar, and such other villages as are still unsurveyed.

Bikaner.

Column 2 (*page 11*).—Until 1903-04 this column stated the khalsa area only; from that year it shows the whole area of the State.

Column 3 states the areas of jagir and such other villages as are still unsurveyed; it also includes the areas which formerly were parts of jagir villages, but which, after the completion of the settlement operations, either lapsed to or were resumed by the State.

Marwar.

Column 2 (*page 11*) states the whole area of the State.

Column 3 states the areas of jagir and such other villages as are still unsurveyed. It also includes the area of those khalsa villages which have not yet been regularly assessed; these are chiefly the latest acquisition to khalsa under the law of escheat.

Columns 4 and 5.—The area by village papers does not differ from the area by survey, for, although differences occur under the different classes of soil, the total area of each village is the same in both cases.

Tonk.

Column 2 (*page 11*) states the whole area of the State.

Column 3 states the area of jagir villages.

Alwar.

Column 2 (*page 9*).—As these has been no reveuue survey so far, this column states the whole area of the State according to the best information available.

Column 3 states the areas of jagir, muafi, and istamrar villages, the boundaries of which have been demarcated, but for which the statistics required for other tables are not available.

Columns 4 and 5.—In the absence of any revenue survey data, the figures in column 5 are repeated in column 4.

Kishangarh.

Column 2 (*page 9*) states the whole area of the State, inclusive of jagir and other alienated ands, taken from the survey maps of the Government of India.

Bharatpur.

Columns 2 and 4 (page 11) state the whole area of the State according to the professional survey of 1855.

Column 5 states the whole area of the State according to the settlement records.

Jhalawar.

Column 2 (page 9) states the whole area of the State.

Column 3 states the area held by jagirdars and udakdars, as well as the muafi plots in the khalsa villages for which no separate record is maintained.

Kotah.

Column 2 (page 11).—Until 1903-04 this column excluded the entire jagir and muafi villages and the Kotri of Bulwan; from that year it states the whole area of the State.

Column 3 states from 1903-04 the entire jagir and muafi villages which have not yet been surveyed, in addition to the detached revenue-free plots situated in khalsa villages which alone appeared in this column up to 1902-03.

See explanations given in the Explanatory Notes (pages 7 and 8)

TABLE No. 2—Classification of Area

The first part of this table deals with the classification of the area entered in column 5 of table No. 1, and gives the proportions (columns 2 and 3) withdrawn from cultivation by inclusion under forests or for some other reason, (column 4) cultivable land available but not yet taken up, (column 5) land occupied but not under crop during the year of report, (column 6) net area sown, that is, after deduction of the area cropped more than once in the year. The second part (columns 8 to 13) gives the area irrigated from various sources, and (columns 14 to 18) the distribution of the irrigated area under specified crops.

GENERAL NOTES

Column 2 (*page 14*).—The definition of the term "forests" is as follows:—"Any land classed, or administered as forest under any legal enactment dealing with forests." Any cultivated areas existing within such forests may be excluded and entered in column 6 (net area cropped), an explanation being given in a note.

Column 3 includes all land absolutely barren, and also all land covered by buildings, water, roads, or otherwise appropriated to uses other than agriculture.

Column 4 includes groves not classed in the cropped area. Areas under bamboos and thatching grass, when not forming parts of forest areas, are included in this column.

Columns 8 to 13 (*pages 14 and 15*) state the area actually irrigated during the year, areas cropped more than once being counted once only.

Columns 14 to 18 state the gross area of irrigated crops, areas cropped more than once being counted as separate areas for each crop. This accounts for the excess in some cases of the total area of crops irrigated (column 18) over the total area irrigated (column 13).

PROVINCIAL NOTES

Mysore.

Column 2 (*page 16*) states the areas of State and district forests and of plantations.

Column 3 includes not only lands absolutely unfit for cultivation, but also lands reserved for pasture, and plantations intended for public use and therefore left unassessed. A large portion of the pasture lands is fit for cultivation, and is given out for cultivation from time to time under special orders, such lands when given out for cultivation being transferred from columns 3 to 5 or 6 as the case may be.

Column 4 states unoccupied assessed waste.

Column 5.—There is no system of fallows, that is, lands are not systematically left uncultivated for the purpose of giving them rest. Individuals occupy large areas and pay full assessment thereon, leaving portions uncultivated, generally for the use of their cattle. For purposes of account the difference between the areas of the lands occupied by individuals and of those actually cultivated by them is taken as fallow. The lands occupied and assessed are sometimes unfit for cultivation, having been taken up on full assessment merely for use as pasture; but the exact area of all such lands cannot be ascertained, though it cannot be large.

Bikaner.

Column 6 (page 24).—Previous to 1901-02 the figures represented the areas prepared for sowing whether actually sown or not. Since then only the areas actually sown have been shown in this column.

Columns 13 and 18 (*page 25*).—In Bikaner the soil cannot stand annual cultivation; land is therefore sometimes irrigated, but left unsown until the following year. This accounts for the excess in some cases in the total area irrigated (column 13) over the total area of crops irrigated (column 18).

Alwar.

Column 10 (*page 15*).—"Tanks" includes canals and *bunds.*

Kishangarh.

Column 2 (*page 14*) states the preserved forests in the khalsa areas exclusive of the jagir and other alienated lands.

Bharatpur.

Column 2 (*page 32*) includes grass preserves (locally called the State *Rundhs*) and hills.

Column 4 includes areas out of cultivation or which have not been cultivated for the last four years or upwards, but excludes State grass preserves (*Rundhs*).

Column 5.—The maximum period for which land thrown out of cultivation is reckoned as fallow is three years.

Column 8 includes area irrigated from the Bareta Bund, constructed by the State Public Works Department.

Kotah.

Column 2 (*page 32*).—Forests in the Kotah sub-division of the Kotah division, not having been separately surveyed, are included in columns 3 and 4.

TABLE No. 3—Area under Crops

This table states the gross area sown with each crop, irrespective of irrigation and double cropping, the area under the latter being included in the statement, but subtracted in column 41 (area cropped more than once). The area is that stated in column 6 of table No. 2.

GENERAL NOTES

In this table are entered the areas actually sown, whether the crop comes to maturity or not, except in cases when fields, owing to the failure of the first sowings, have been devoted to other crops : in such cases the area first sown is omitted.

In cases where two or more crops are grown together, an estimate is made of the area covered by each, and the areas so estimated are separately returned. The estimate is made by the village accountant, or is subsequently determined on formulæ prescribed by the provincial authorities.

Columns 10, 15, 19, 22, 27, 34, 38 and 39 (*pages 36—39*).—The selection of crops for inclusion in these columns is left to the local authorities.

PROVINCIAL NOTES

The areas under mixed crops are distinguished and entered under the respective crops of which they are composed. The area of failed crops is included except when, owing to the failure of the first sowings, it has been devoted to other crops: in such cases the area first sown is omitted. *Gwalior.*

Column 14 (*pages 49—51*) includes linseed and rapeseed for which separate statistics are not available.

Previous to 1901-02 the figures in this table represented the area on which crops came to maturity. Since then the area actually sown with crops has been shown. *Bikaner.*

The areas under mixed crops are distinguished so far as practicable and entered under the respective crops of which they are composed. The area of failed crops is included except when, owing to the failure of the first sowings, it has been devoted to other crops : in such cases the area first sown is omitted. *Bharatpur.*

TABLE No. 4.—Live-Stock, Ploughs, and Carts.

This table deals with agricultural stock.

GENERAL NOTES.

In some States the figures include, and in others exclude, animals in towns, cities, and cantonments. Oxen and buffaloes not old enough for work or to produce young are classed as "young stock."

The figures generally are greatly lacking in accuracy.

PROVINCIAL NOTES.

Mysore. Until 1898-99 statistics were collected every year by the shanbog and patel of each village by enquiry or inspection. Since that year a census is taken every five years as nearly as possible simultaneously throughout the State. The last census was taken in September 1904. Stock in municipalities has been included since 1896-97.

Bikaner. Animals in cities and towns are not included.

Alwar. A cattle census is taken every fourth year simultaneously throughout the State. The last census was taken in December 1904. Animals in towns, cities, and cantonments are included.

Bharatpur. A census of cattle is taken by the patwaris each year at the time of kharif crop inspection in September. Animals in cities, towns, and military lines are included. Oxen and buffaloes not old enough for work or to produce young are treated as "young stock."

No. 4

(a) Amalgamated with Kotah in 1904-05

TABLE No. 5—Land Revenue

This table is intended to indicate the relation between area, population, and land revenue, or in other words, to exhibit the mean burden of the State assessment on the land assessed to it and on the community at large.

GENERAL NOTES

The following rules were prescribed by the Government of India in 1893 for filling in this table :—

Entry 1 in general table No. 5 (page 79), column 2 in provincial tables Nos. 5 (A to H) (pages 81—88).—The varieties of tenure entered should be included, as far as possible, under one or other of the following, namely, (1) raiyatwari, (2) zamindari and village communities (temporarily settled), (3) zamindari (permanently settled).

Entry 2 (a) in general table (page 79), column 3 (a) in provincial tables (pages 81—88).—Areas held revenue-free or at privileged rates should be deducted, but the deduction need not be made where such areas are in any case less than an entire village, and where there is any difficulty in estimating the corresponding deduction to be made in the population head 10 (column 11). Areas should not be entered in this column merely because the assessment due from them has been suspended or remitted on account of short crops, or for other special reasons.

Entry 3 in general table (page 79), column 4 in provincial tables (pages 81—88).—This column should be sub-divided into (*a*) total fully assessed area for which returns are available, and (*b*) area cultivated out of the area given in head (*a*). The latter head should be equal to the former after deducting current fallows and fully assessed waste.

Entry 4 in general table (page 79), column 5 in provincial tables (pages 81—88).—Where land revenue includes the Zamindar's share the net demand should be entered, and the table should state the payments due by the Zamindars to Government not those by the raiyats to the zamindars. The actual realisable demand for the year should be entered, after excluding arrears for past years. Sums remitted on account of unoccupied lands, short crops, etc., should be excluded. This column should include all the heads classed as "Land Revenue" in the Civil Accounts.

Entry 7 in general table (page 80), column 8 in provincial tables (pages 81—88).—As in entry 4 (column 5), but only ordinary land revenue on fully assessed areas is to be entered.

Entry 8 in general table (page 80), column 9 in provincial tables (pages 81—88).—To be entry 7 (column 8), divided by entry 3 (*a*) [column 4 (*a*)].

Entry 9 in general table (page 80), column 10 in provincial tables (pages 81—88).—To be entry 7 (column 8), divided by entry 3 (*b*) [column 4 (*b*)]. Areas under forest are included in entry 1 (column 2) under the prevailing tenure of the State.

The population in entry 5 (column 6) is that of the last general census.

PROVINCIAL NOTES

Mysore.

Column 3 (a) (page 81) states the area entered in column 3 of table No. 1 and in column 4 of table No. 2.

Column 3 (b) states the area entered in columns 2 and 3 of table No. 2.

Column 4 (a) states Government occupied lands including minor ináms in Government villages (columns 5 and 6 of table No. 2).

Column 4 (b) states the area actually sown (column 6 of table No. 2).

Column 5 states the total realisable land revenue, including miscellaneous land revenue.

Column 8 states the total raiyatwari demand, *plus* the quit-rent due on minor ináms in Government villages.

Gwalior.

Column 2 (page 83) states the net area by survey (column 4 of table No. 1).

Column 4 (a) includes area not fully assessed which cannot be separated from area fully assessed.

Column 5 states "Land Revenue" as defined in the Civil Accounts, and includes cesses which cannot be separated from the land revenue.

Column 8 states only ordinary land revenue with cesses.

Columns 9 and 10.—The figures in these columns represent the incidence of land revenue on areas both fully and partially assessed.

Column 11.—Includes population of area not fully assessed which cannot be separated from that of fully assessed area.

Marwar.

Column 2 (page 85) states only the khalsa area, as statistics of revenue are not available for the whole State of which the area is stated in table No. 1.

Column 4 (b) states not only the area actually under crops, but also fallow lands, as revenue rates are assessed on the total cultivated area including fallows. Hence the area stated in this column exceeds the total area in table No. 3.

Tonk.

Column 2 (page 86) states the net area by survey (column 4 of table No. 1).

Alwar.

The classes of tenure are zamindari and village communities, the former comprising *zamindari-bil-ijmal* and the latter *pattidari* and *bhaiyachara.*

Item 1 (*page 79*) states the area by village papers (column 5 of table No. 1).

Item 2 (*a*) shows areas covered with forests (column 2 of table No. 2) which are wholly revenue-free.

Kishangarh.

The table is not prepared, the information not being available.

Bharatpur.

Column 1 (*page 87*).—The State area leased to cultivators for a fixed term is returned as *raiyatwari.* The area leased out on condition of proprietary rights being given to lessees if they reclaimed land within a fixed term is returned as *zamindari—temporarily settled;* and the rest of the area (*i.e.*, the area remaining after deduction of the raiyatwari and the temporarily-settled zamindari areas from the total area), is entered as *zamindari—permanently settled.*

Column 3 (*a*) includes muafi, chauth, and istimrar areas.

Column 6.—The population stated is that of the last census.

Column 11 shows the total population in cases where separate figures for areas fully and not fully assessed are not available.

Jhalawar.

The whole area stated in this table is classed as "Khatedari" and "Watendari" equivalent to "raiyatwari" and "zamindari," respectively.

Item 1 (*page 79*) excludes entire villages held by jagirdars and udakdars.

Kotah.

Column 2 (*page 88*) states the area by village papers (column 5 of table No. 1).

Column 6 includes population of the muafi and jagir villages excluded from column 2.

TABLE No. 6—TRANSFERS OF LAND

This table is intended to exhibit the number of voluntary and compulsory transfers of ownership of land or tenant right, and the area so transferred. Voluntary transfers mean transfers made by actual contract or gift, transfers by inheritance not being taken into account.

The table is at present prepared only by the States of Mysore and Alwar.

GENERAL NOTES

It is optional with the local authorities to enter or omit transfers of lands held by tenants.

The following rules have been prescribed for the preparation of this return :—

(1) Changes of entry due to succession, partitions or simple mortgages, are not really transfers and should be excluded from the table, as also should redemptions of mortgage ;

(2) All temporary transfers, such as leases, should also be excluded, but mortgage with possession should be treated as a transfer and entered in the table;

(3) All transfers made by order of a court should also be included in the table ;

(4) The word "court" in the entry "by order of court" should be held to include a revenue court.

PROVINCIAL NOTES

Mysore. Only permanent transfers are included as by sale or gift, in which the parties concerned apply for and obtain transfers of revenue registry in the village accounts from which the table is compiled. Thus, changes of registry under orders of civil and revenue courts, as well as those effected in consequence of the sale of land for arrears of Government revenue, are included.

Alwar. Transfers by mortgage with possession, sale, and gift, both of proprietary and of occupancy rights, whether by order of court or by private contract, are shown in this table, and include property confiscated by order of a criminal court, and holdings transferred by order of a civil or revenue court in satisfaction of money decrees or arrears of land revenue respectively.
